Pump Lift 5x

Monday January 19, 2026

Week 4 Day 1 – Persist PUMP LIFT 5x

A) Daily Focus Notes:
Single Arm DB Row
This exercise is one that can be performed a number of different ways in order to target different parts of the back. Depending on the elbow position you can target more lats, rhomboids, or biceps. For today, I'd like you to focus on pulling the dumbbell up and back towards the hip. Keeping the elbow close and dumbbell by the hip will target the lats more.
Short on Time? Remove Finisher.

It's not a "complimentary" circuit — instead, it challenges each muscle in a new way. You'll feel the burn, but it builds balanced pressing strength and shoulder stability.
Short on Time? Remove Finisher.

Week 4 Day 5 – Persist PUMP LIFT 5x

A) Daily Focus Notes:
Bradford Press to Full Press: Control the Motion
The Bradford Press is all about control. You may use a slightly wider grip than your normal strict press to assure comfort in the behind the head position. Move the bar just over your head and back down in front without locking out the elbows — this builds constant tension in the shoulders.
Use lighter weight and focus on smooth, even transitions. This week you will be pairing the Bradford press with a full press - be sure to watch the demo video.

Week 4 Day 7 – Persist PUMP LIFT 5x
WORK IN LESSON
Can't back squat without pain? Can't shoulder press without broken glass coming to mind?

Everyone meets their bodies' limitations at some point - and it's okay. I actually have great news: getting stronger fixes a lot of it. But this app is probably not going to magically suggest which movement you need, so you're going to have to get creative.

Try a different angle (raising your heels for squats; landmine pressing instead of straight overhead). Add more stability, like a bench or machine. Lower the weight and explore to find what feels safe, then build up again from there.

Just don't stop. And reach out if you need help - that's what we're here for. Tap the ? icon to send us a message any time.

With love,
Marcus

Week 4 Day 7 - Persist PUMP LIFT 4x
WORK IN LESSON
Can't back squat without pain? Can't shoulder press without broken glass coming to mind?

Everyone meets their bodies' limitations at some point - and it's okay. I actually have great news: getting stronger fixes a lot of it. But this app is probably not going to magically suggest which movement you need, so you're going to have to get creative.

Try a different angle (raising your heels for squats; landmine pressing instead of straight overhead). Add more stability, like a bench or machine. Lower the weight and explore to find what feels safe, then build up again from there.

Just don't stop. And reach out if you need help - that's what we're here for. Tap the ? icon to send us a message any time.

The pull up can be a very hard movement to progress, but tempo is a great tool to break through plateaus.
Short on Time? Remove Finisher.

Pump Condition 5x

Monday January 19, 2026

Week 4 Day 1 – Persist PUMP CONDITION 5x
Daily Focus Note: Incline Prone Dumbbell Row Advantage
The Incline Prone Dumbbell Row is great for building your back, especially when your lower back is already tired from other lifts. Lying face down on the bench supports your body, so you can focus on working your lats, mid-back, and rear shoulders.
Pull your elbows toward your hips and lower the weights slowly. This helps you get a strong back workout without putting stress on your lower back.
Short on Time? Reduce Strength Balance to 2 Sets.

Week 4 Day 2 – Persist PUMP CONDITION 5x

Row, Press, and Core Intervals

Daily Focus Note:

Today's conditioning piece is all about power and pacing. Each 2:30 interval challenges your ability to move fast while staying smooth. Push the pace a little more on the row each round, then focus on strong, quick drive through the dumbbell push press — use your legs to help the arms. Finish each set with solid, controlled sit-ups to train the core under fatigue. The goal is to earn at least 30 seconds of rest each round, so adjust reps if needed to stay consistent. Keep each effort sharp and purposeful — every round should feel like a strong push, not a sprint.

Short on Time? Reduce Conditioning to 3-4 sets.

Warm-up (8 min)

Week 4 Day 3 – Persist PUMP CONDITION 5x
Quality Work and Smart Pacing

Daily Focus Note:
Today's conditioning is about control and consistency. The mixed KB reverse lunge challenges your balance, grip, and posture all at once. Switching sides each round keeps your body balanced and your core working hard. Move with focus — keep your chest tall and drive through the front leg. On the bike, hold a steady, sustainable pace so you can finish strong each round and earn rest before the next set. Aim for smooth, repeatable effort every interval.
Short on Time? Reduce conditioning to 3 sets.

Week 4 Day 5 – Persist PUMP CONDITION 5x
Daily Focus Note: Smooth Transitions and Smart Effort
Today's piece is a balanced push-pull workout that tests endurance, control, and smart pacing. The first half pairs rowing with parallette push-ups, challenging your pressing strength and stamina. The second half flips the focus to rowing and single-arm rows, targeting the upper back and lats. Move at a steady, repeatable pace from start to finish — take short, planned breaks before hitting failure so you can keep moving. Aim for smooth transitions between movements and focus on maintaining good form under fatigue.

Week 4 Day 7 – Persist PUMP CONDITION 5x
WORK IN LESSON
Can't back squat without pain? Can't shoulder press without broken glass coming to mind?

Everyone meets their bodies' limitations at some point - and it's okay. I actually have great news: getting stronger fixes a lot of it. But this app is probably not going to magically suggest which movement you need, so you're going to have to get creative.

Try a different angle (raising your heels for squats; landmine pressing instead of straight overhead). Add more stability, like a bench or machine. Lower the weight and explore to find what feels safe, then build up again from there.

Just don't stop. And reach out if you need help - that's what we're here for. Tap the ? icon to send us a message any time.

Week 4 Day 1 - Persist PUMP CONDITION 4x

A) Daily Focus Notes: Row, Press, and Core Intervals
Today's conditioning piece is all about power and pacing. Each 2:30 interval challenges your ability to move fast while staying smooth. Push the pace a little more on the row each round, then focus on strong, quick drive through the dumbbell push press — use your legs to help the arms. Finish each set with solid, controlled sit-ups to train the core under fatigue. The goal is to earn at least 30

seconds of rest each round, so adjust reps if needed to stay consistent. Keep each effort sharp and purposeful — every round should feel like a strong push, not a sprint.
Short on Time? Reduce Conditioning to 3-4 sets.

B) Warmup (8 min):
3 Rounds
90 sec Cardio of Choice
Quadruped Crawl; 10m
Reverse Quadruped Crawl; 10m

Keep weight the same for all sets. The accumulated fatigue will lead to an increase in RPE (Rate of Perceived Exertion - scale of 10 where 10 is form failure). Aim to match weight from Week 2. The reps have increased from 6->8.

D) Strength Balance (15 min):
3-4 sets
Supinated Strict Pullup; 6-10 reps @30X0

Today's conditioning is about control and consistency. The mixed KB reverse lunge challenges your balance, grip, and posture all at once. Switching sides each round keeps your body balanced and your core working hard. Move with focus — keep your chest tall and drive through the front leg. On the bike, hold a steady, sustainable pace so you can finish strong each round and earn rest before the next set. Aim for smooth, repeatable effort every interval.
Short on Time? Reduce conditioning to 3 sets.

B) Warmup (8 min):

Week 4 Day 7 - Persist PUMP CONDITION 3x
WORK IN LESSON
Can't back squat without pain? Can't shoulder press without broken glass coming to mind?

Everyone meets their bodies' limitations at some point - and it's okay. I actually have great news: getting stronger fixes a lot of it. But this app is probably not going to magically suggest which movement you need, so you're going to have to get creative.

Try a different angle (raising your heels for squats; landmine pressing instead of straight overhead). Add more stability, like a bench or machine. Lower the weight and explore to find what feels safe, then build up again from there.

Just don't stop. And reach out if you need help - that's what we're here for. Tap the ? icon to send us a message any time.

Week 4 Day 1 - Persist PERFORM

A) Daily Focus Notes: Incline Prone Dumbbell Row Advantage
The Incline Prone Dumbbell Row is great for building your back, especially when your lower back is already tired from other lifts. Lying face down on the bench supports your body, so you can focus on working your lats, mid-back, and rear shoulders.
Pull your elbows toward your hips and lower the weights slowly. This helps you get a strong back workout without putting stress on your lower back.
Short on Time? Reduce Strength Balance to 2 Sets.

B) Warmup (8 min):

15 sec Cardio Sprint

Every 3:00 x 3-4 sets
15/12 Cal Bike
3-5 Bar or Ring Muscle Up
Handstand Walk; 25ft or Handstand Hold; 30 sec

Week 4 Day 2 - Persist PERFORM

A) Daily Focus Notes: Row, Press, and Core Intervals
Today's conditioning piece is all about power and pacing. Each 2:30 interval challenges your ability to move fast while staying smooth. Push the pace a little more on the row each round, then focus on strong, quick drive through the dumbbell push press — use your legs to help the arms. Finish each set with solid, controlled sit-ups to train the core under fatigue. The goal is to earn at least 30

seconds of rest each round, so adjust reps if needed to stay consistent. Keep each effort sharp and purposeful — every round should feel like a strong push, not a sprint.
Short on Time? Reduce Conditioning to 3-4 sets.

Week 4 Day 3 - Persist PERFORM

A) Daily Focus Notes: Quality Work and Smart Pacing
Today's conditioning is about control and consistency. The Mixed KB Rack Reverse Lunge challenges your balance, grip, and posture all at once. Switching sides each round keeps your body balanced and your core working hard. Move with focus — keep your chest tall and drive through the front leg. On the bike, hold a steady, sustainable pace so you can finish strong each round and earn rest before the next set. Aim for smooth, repeatable effort every interval.
Short on Time? Reduce conditioning to 3 sets.

Active Recovery Day

A) Active Recovery Work:
Goal: Complete 25 minutes of low-intensity steady-state movement today. Go for a jog, hike, walk, ruck, bike, or swim. If you want a GYM OPTION, please use the following. You should keep your heart rate in the Zone 2 range. That can be calculated roughly as 65-75% of your theoretical maximal HR (220-age). Be mindful not to push your intensity too high. Small spikes in heart rate are fine. Just don't attempt to trash your body or muscles.

Week 4 Day 5 - Persist PERFORM

A) Daily Focus Notes: Smooth Transitions and Smart Effort
Today's piece is a balanced push-pull workout that tests endurance, control, and smart pacing. The first half pairs rowing with parallette push-ups, challenging your pressing strength and stamina. The second half flips the focus to rowing and single-arm rows, targeting the upper back and lats. Move at a steady, repeatable pace from start to finish — take short, planned breaks before hitting failure so you can keep moving. Aim for smooth transitions between movements and focus on maintaining good form under fatigue.

Week 4 Day 6 - Persist PERFORM

A) Daily Focus Notes: Landmine Cossack Squat
After reviewing a dozen form videos from clients on this exercise in the past month, I want to give a couple movement cues that can improve the impact of this exercise. The landmine is not just a loading tool here, but a chance to gain additional stability and balance. Lean forward into the landmine so you can feel the stability and support of holding onto a fixed object. This should allow you to explore even deeper positions in the squat than you would otherwise. Focus on getting as deep into the squat as possible on each rep. This is more important than the load on the bar.
Short on Time? Remove Strength Balance.

finishes each round with focused core stability. Stay patient, keep breathing, and move with purpose — this workout builds strength through time under tension, not speed.

Week 4 Day 7 - Persist MINIMALIST
WORK IN LESSON
Can't back squat without pain? Can't shoulder press without broken glass coming to mind?

Everyone meets their bodies' limitations at some point - and it's okay. I actually have great news: getting stronger fixes a lot of it. But this app is probably not going to magically suggest which movement you need, so you're going to have to get creative.

Try a different angle (raising your heels for squats; landmine pressing instead of straight overhead). Add more stability, like a bench or machine. Lower the weight and explore to find what feels safe, then build up again from there.

Just don’t stop. And reach out if you need help - that’s what we’re here for. Tap the ? icon to send us a message any time.

With love,
Marcus
