Monday February 2, 2026

A) Daily Focus Notes: Why Deadlifts Lead the Session
We start the Full Body Pull Day with deadlifts because they take the most energy and focus. Heavy pulling needs your full attention and fresh muscles.

Short on Time? Remove Finisher.

Half Kneeling DB Press Core Integration
The Half Kneeling Dumbbell Press combines upper body strength with core control. By pressing from a kneeling stance, your abs and glutes must stay tight to keep your body stable. WORK IN LESSON

Calling all my people who have a lot on your plate: your biggest limiter might be decision fatigue.

Steve Jobs was famous for wearing the same black turtleneck daily. And the man was onto something.
That's why I batch cook 5 meals that get me 20 portions each, and rotate through.

Can't decide what to eat? Chicken, rice, and broccoli.
Can't decide what Persist track to do next? Pump Lift 3x.

Are these the best, most optimized choices for your particular situation? Does it matter? For the vast majority of people, they'll work great - and keep you moving forward.

Simplicity is sexy - and it works.

With love,
Marcus

Week 6 Day 7 – Persist PUMP CONDITION 5x

WORK IN LESSON

Calling all my people who have a lot on your plate: your biggest limiter might be decision fatigue.

Steve Jobs was famous for wearing the same black turtleneck daily. And the man was onto something.
That's why I batch cook 5 meals that get me 20 portions each, and rotate through.

Can't decide what to eat? Chicken, rice, and broccoli.
Can't decide what Persist track to do next? Pump Lift 3x.

Are these the best, most optimized choices for your particular situation? Does it matter? For the vast majority of people, they'll work great - and keep you moving forward.

Simplicity is sexy - and it works.

Pump Condition 4x

Monday February 2, 2026

Week 6 Day 1 - Persist PUMP CONDITION 4x

A) Daily Focus Notes: Power and Stability Intervals
Today's conditioning focuses on powerful pressing and overhead control. Each round starts with a strong effort on the row — try to increase your pace slightly each set. The dual kettlebell push press trains explosive leg drive and shoulder power, while the overhead carry builds stability through your core, shoulders, and grip. Finish with controlled sit-ups to keep the trunk strong under fatigue. The goal is to move efficiently and earn at least 30 seconds of rest each interval. Stay smooth, steady, and powerful from start to finish.
Short on Time? Reduce conditioning to 3-4 sets.

B) Warmup (8 min):
2 min Cardio of Choice

Week 6 Day 7 - Persist PUMP CONDITION 3x

WORK IN LESSON

Calling all my people who have a lot on your plate: your biggest limiter might be decision fatigue.

Steve Jobs was famous for wearing the same black turtleneck daily. And the man was onto something.
That's why I batch cook 5 meals that get me 20 portions each, and rotate through.

Can't decide what to eat? Chicken, rice, and broccoli.
Can't decide what Persist track to do next? Pump Lift 3x.

Are these the best, most optimized choices for your particular situation? Does it matter? For the vast majority of people, they'll work great - and keep you moving forward.

Simplicity is sexy - and it works.

With love,
Marcus

Week 6 Day 1 – Persist PERFORM

A) Daily Focus Notes: Full Body AMRAP
Today's workout is all about steady effort and smart pacing. The 15-minute AMRAP (As Many Rounds/Reps As Possible) mixes cardio and full-body power with the bike and single-arm Devil's Press. Find a rhythm early that lets you keep moving without burning out too soon. The short rest after each round is there to help you reset — take deep breaths, then get right back to work. As you hit the halfway point, challenge yourself to pick up the pace and finish strong. This one rewards control, consistency, and grit.
Short on Time? Reduce Strength Balance to 2 Sets.

Active Recovery Day

A) Active Recovery Work:
Goal: Complete 30 minutes of low-intensity steady-state movement today. Go for a jog, hike, walk, ruck, bike, or swim. If you want a GYM OPTION, please use the following. You should keep your heart rate in the Zone 2 range. That can be calculated roughly as 65-75% of your theoretical

maximal HR (220-age). Be mindful not to push your intensity too high. Small spikes in heart rate are fine. Just don't attempt to trash your body or muscles.

Week 6 Day 1 - Persist MINIMALIST

A) Daily Focus Notes: Power and Stability Intervals
Today's conditioning focuses on powerful pressing and overhead control. Each round starts with a strong effort on the Run — try to increase your pace slightly each set. The dual DB push press trains explosive leg drive and shoulder power, while the overhead carry builds stability through your core, shoulders, and grip. Finish with controlled sit-ups to keep the trunk strong under fatigue. The goal is to move efficiently and earn at least 30 seconds of rest each interval. Stay smooth, steady, and powerful from start to finish.
Short on Time? Reduce conditioning to 3-4 sets.
