Pump Lift 5x

Monday, March 23rd 2026

Week 1 Day 1 - Persist PUMP LIFT 5x
Pump Lift 5x - April

A) Daily Focus Note:
Front Squat Progression
This training cycle alternates between two front squat variations: the traditional front squat and the cyclist front squat. Each one serves a different purpose, so you can make steady progress across all 6 weeks. The traditional front squat is your strength-focused day. Expect heavier and more challenging sets where the priority is maintaining strong positioning and producing quality tension under load. The cyclist front squat shifts the emphasis toward the legs. With the elevated heels and more upright torso, you'll be able to accumulate more quad-focused volume without needing maximal weight. By rotating these variations week to week, you'll build strength and muscle while making progress without excessive fatigue or joint stress throughout the cycle.

Week 1 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Note:
Overhead Press Progression
In the last training block, you explored several overhead pressing variations to prepare for the heavier barbell work in this cycle. Now we'll alternate Z Presses and Push Presses each week, allowing you to handle moderate to heavy loads while continuing to build strong overhead mechanics. On the even weeks, pay close attention to the tempo during the push press. Controlling the lowering phase is what creates the shoulder stimulus, not just moving the weight overhead. The Z Press this week may feel like a mobility challenge. If sitting upright is difficult, elevate your hips on a few plates to maintain a tall posture. The goal isn't discomfort — it's learning to create strong core engagement while pressing, which carries over to more efficient and stable overhead mechanics. Move well first, then load it.

A) Daily Focus Note:
Strength Intensity 1 Progression
For the next six weeks in Strength Intensity 1, you'll have the option to perform either a pulldown or a pull up. This choice isn't about one being better than the other — it simply allows for different equipment availability. You're welcome to switch between them, but if possible, stick with the same variation each week so you can track progress and build consistency across the cycle.

Week 1 Day 5 - Persist PUMP LIFT 5x

A) Daily Focus Note:
Hinge Progression
The Strength Intensity 1 hinge progression includes both the conventional deadlift and the Romanian deadlift. Each is a heavy-load hinge variation, and throughout the cycle, reps will decrease so you can gradually increase the weight. RPE targets are provided, but if you're not fully confident in your hinge or deadlift technique, it's perfectly fine to stay closer to an RPE 7 for all sets. That intensity is still high enough to build strength and muscle while helping you maintain better positions and control.

Week 1 Day 7 - Persist PUMP LIFT 5x

Longevity has quietly become code for "I'm done pushing." I hear it all the time: "I just want to train for longevity" or "I just want to maintain where I'm at." And I get it. You're not 22. You don't want to grind yourself into dust five days a week.
But longevity isn't maintenance mode.
Your body adapts to challenge. If you're not pushing against resistance — real resistance — you're slowly losing strength, muscle, and bone density. That slide doesn't start at 70. It starts now.
Training for longevity doesn't mean taking it easy. It means training with intention, structure, and effort — in a way you can sustain for decades.
Don't coast. Your future self is counting on what you do today.

With love,
Marcus

Week 1 Day 7 - Persist PUMP LIFT 5x

Longevity has quietly become code for "I'm done pushing." I hear it all the time: "I just want to train for longevity" or "I just want to maintain where I'm at." And I get it. You're not 22. You don't want to grind yourself into dust five days a week.
But longevity isn't maintenance mode.
Your body adapts to challenge. If you're not pushing against resistance — real resistance — you're slowly losing strength, muscle, and bone density. That slide doesn't start at 70. It starts now.
Training for longevity doesn't mean taking it easy. It means training with intention, structure, and effort — in a way you can sustain for decades.
Don't coast. Your future self is counting on what you do today.

Week 1 Day 3 - Persist PUMP LIFT 3x

A) Daily Focus Note:
Overhead Press Progression
In the last training block, you explored several overhead pressing variations to prepare for the heavier barbell work in this cycle. Now we'll alternate Z Presses and Push Presses each week, allowing you to handle moderate to heavy loads while continuing to build strong overhead mechanics. On the even weeks, pay close attention to the tempo during the push press. Controlling the lowering phase is what creates the shoulder stimulus, not just moving the weight overhead. The Z Press this week may feel like a mobility challenge. If sitting upright is difficult, elevate your hips on a few plates to maintain a tall posture. The goal isn't discomfort — it's learning to create strong core engagement while pressing, which carries over to more efficient and stable overhead mechanics. Move well first, then load it.
Short on Time? Remove Finisher

Week 1 Day 5 - Persist PUMP LIFT 3x

A) Daily Focus Note:
Hinge Progression
The Strength Intensity 1 hinge progression includes both the conventional deadlift and the Romanian deadlift. Each is a heavy-load hinge variation, and throughout the cycle, reps will decrease so you can gradually increase the weight. RPE targets are provided, but if you're not fully confident in your hinge or deadlift technique, it's perfectly fine to stay closer to an RPE 7 for all sets. That intensity is still high enough to build strength and muscle while helping you maintain better positions and control.

Week 1 Day 1 - Persist PUMP CONDITION 5x

A) Daily Focus Note:
Front Squat Progression
This training cycle alternates between two front squat variations: the traditional front squat and the cyclist front squat. Each one serves a different purpose, so you can make steady progress across all 6 weeks. The traditional front squat is your strength-focused day. Expect heavier, more challenging sets, with the priority on maintaining strong positioning and producing quality tension under load. The cyclist front squat shifts the emphasis toward the legs. With the elevated heels and more upright torso, you'll be able to accumulate more quad-focused volume without needing maximal weight. By rotating these variations week to week, you'll build strength and muscle while making progress without excessive fatigue or joint stress throughout the cycle.

Week 1 Day 7 - Persist PUMP LIFT 5x

Longevity has quietly become code for "I'm done pushing." I hear it all the time: "I just want to train for longevity" or "I just want to maintain where I'm at." And I get it. You're not 22. You don't want to grind yourself into dust five days a week.
But longevity isn't maintenance mode.
Your body adapts to challenge. If you're not pushing against resistance — real resistance — you're slowly losing strength, muscle, and bone density. That slide doesn't start at 70. It starts now.
Training for longevity doesn't mean taking it easy. It means training with intention, structure, and effort — in a way you can sustain for decades.
Don't coast. Your future self is counting on what you do today.

Week 1 Day 1 - Persist PUMP CONDITION 4x
March 23rd, 2026

A) Daily Focus Note:
Front Squat Progression

This training cycle alternates between two front squat variations: the traditional front squat and the cyclist front squat. Each one serves a different purpose, so you can make steady progress across all 6 weeks. The traditional front squat is your strength-focused day. Expect heavier, more challenging sets, with the priority on maintaining strong positioning and producing quality tension under load. The cyclist front squat shifts the emphasis toward the legs. With the elevated heels and more upright torso, you'll be able to accumulate more quad-focused volume without needing maximal weight. By rotating these variations week to week, you'll build strength and muscle while making progress without excessive fatigue or joint stress throughout the cycle.

Week 1 Day 2 - Persist PUMP CONDITION 4x
March 24th, 2026

A) Daily Focus Note:
Overhead Press Progression
In the last training block, you explored several overhead pressing variations to prepare for the heavier barbell work in this cycle. Now we'll alternate Z Presses and Push Presses each week, allowing you to handle moderate to heavy loads while continuing to build strong overhead mechanics. On the even weeks, pay close attention to the tempo during the push press. Controlling the lowering phase is what creates the shoulder stimulus, not just moving the weight overhead.
The Z Press this week may feel like a mobility challenge. If sitting upright is difficult, elevate your hips on a few plates to maintain a tall posture. The goal isn't discomfort — it's learning to create strong core engagement while pressing, which carries over to more efficient and stable overhead mechanics. Move well first, then load it.
Short on Time? Remove Strength Balance

Week 1 Day 7 - Persist PUMP LIFT 5x

Longevity has quietly become code for "I'm done pushing." I hear it all the time: "I just want to train for longevity" or "I just want to maintain where I'm at." And I get it. You're not 22. You don't want to grind yourself into dust five days a week.
But longevity isn't maintenance mode.
Your body adapts to challenge. If you're not pushing against resistance — real resistance — you're slowly losing strength, muscle, and bone density. That slide doesn't start at 70. It starts now.
Training for longevity doesn't mean taking it easy. It means training with intention, structure, and effort — in a way you can sustain for decades.
Don't coast. Your future self is counting on what you do today.

With love,
Marcus

Week 1 Day 1 - Persist PERFORM

A) Daily Focus Note:
Front Squat Progression
This training cycle alternates between two front squat variations: the traditional front squat and the cyclist front squat. Each one serves a different purpose, so you can make steady progress across all 6 weeks. The traditional front squat is your strength-focused day. Expect heavier, more challenging sets, with the priority on maintaining strong positioning and producing quality tension under load. The cyclist front squat shifts the emphasis toward the legs. With the elevated heels and more upright torso, you'll be able to accumulate more quad-focused volume without needing maximal weight. By rotating these variations week to week, you'll build strength and muscle while making progress without excessive fatigue or joint stress throughout the cycle.

Week 1 Day 2 - Persist PERFORM

A) Daily Focus Note:
Overhead Press Progression
In the last training block, you explored several overhead pressing variations to prepare for the heavier barbell work in this cycle. Now we'll alternate Z Presses and Push Presses each week, allowing you to handle moderate to heavy loads while continuing to build strong overhead mechanics. On the even weeks, pay close attention to the tempo during the push press. Controlling the lowering phase is what creates the shoulder stimulus, not just moving the weight overhead.
The Z Press this week may feel like a mobility challenge. If sitting upright is difficult, elevate your hips on a few plates to maintain a tall posture. The goal isn't discomfort — it's learning to create strong core engagement while pressing, which carries over to more efficient and stable overhead mechanics. Move well first, then load it.

Strength Intensity Progression
For the next six weeks in Strength Intensity 1, you'll have the option to perform either a pulldown or a pull up. This choice isn't about one being better than the other — it simply allows for different

equipment availability. You're welcome to switch between them, but if possible, stick with the same variation each week so you can track progress and build consistency across the cycle.

Week 1 Day 5 - Persist PERFORM

A) Daily Focus Note:
Hinge Progression
The Strength Intensity 1 hinge progression includes both the conventional deadlift and the Romanian deadlift. Each is a heavy-load hinge variation, and throughout the cycle, reps will decrease so you can gradually increase the weight. RPE targets are provided, but if you're not fully confident in your hinge or deadlift technique, it's perfectly fine to stay closer to an RPE 7 for all sets. That intensity is still high enough to build strength and muscle while helping you maintain better positions and control.

Week 1 Day 6 - Persist PERFORM

A) Daily Focus Note:
Bench Press Progression
This training block uses three bench press angles across the progression. Week 1 is a traditional incline bench (about 30–45 degrees), Week 2 moves to a low incline (about 10–30 degrees), and Week 3 is a flat bench press. As the incline decreases, you should be able to handle more weight. Expect the load to gradually increase as the pressing angle becomes more favorable.

Week 1 Day 1 - Persist Minimalist

A) Daily Focus Note:
Primarily Squat Strength
This training cycle alternates between the split squat and the suitcase cyclist squat. Both exercises require holding the weights near the hips. This different load placement is favorable for many individuals creating a greater sense of using the “hips” when squatting. This slight change in sensation generally produces a more comfortable squatting experience.

The order rotates as follows:
Minute 1 – 1st exercise only

A) Daily Focus Note:
Overhead Press Progression
In the last training block, you explored several overhead pressing variations to prepare for the heavier dumbbell work in this cycle. Now we'll alternate Z Presses and Push Presses each week, allowing you to handle moderate to heavy loads while continuing to build strong overhead mechanics. On the even weeks, pay close attention to the tempo during the push press. Controlling the lowering phase is what creates the shoulder stimulus, not just moving the weight overhead. The Z Press this week may feel like a mobility challenge. If sitting upright is difficult, elevate your hips on a few plates to maintain a tall posture. The goal isn't discomfort — it's learning to create strong core engagement while pressing, which carries over to more efficient and stable overhead mechanics. Move well first, then load it.

Week 1 Day 4 - Persist Minimalist

A) Daily Focus Note:
Single Leg DB RDL Technique
During the single-leg DB RDL, let your back foot point toward the ground rather than opening out to the side. This helps your pelvis rotate toward the front leg, allowing for a smoother, more natural hip hinge. You can reinforce this by gently turning your ”zipper line” slightly toward the stance leg as you lower the weight. Both cues improve hip mechanics and help you feel the work where we want it most — the glutes of the working leg rather than the low back. Focus on control and balance first, then load.
Short on Time? Remove Strength Balance or Conditioning

B) Warmup (8 min):
2-3 Rounds
1) 90 sec Cardio of Choice

Week 1 Day 5 - Persist Minimalist

A) Daily Focus Note:
Incline DB Bench Press
The dumbbell incline bench press is essential for developing the upper chest, creating a fuller chest appearance, and correcting strength imbalances. Using dumbbells allows for a greater range of motion, increased stabilizer muscle recruitment, and reduced shoulder strain compared to barbells.

Week 1 Day 7 - Persist PUMP LIFT 5x

Longevity has quietly become code for "I'm done pushing." I hear it all the time: "I just want to train for longevity" or "I just want to maintain where I'm at." And I get it. You're not 22. You don't want to grind yourself into dust five days a week.
But longevity isn't maintenance mode.
Your body adapts to challenge. If you're not pushing against resistance — real resistance — you're slowly losing strength, muscle, and bone density. That slide doesn't start at 70. It starts now.
Training for longevity doesn't mean taking it easy. It means training with intention, structure, and effort — in a way you can sustain for decades.
Don't coast. Your future self is counting on what you do today.

With love,
Marcus
