# Pump Lift 5x

## Monday, April 13th, 2026

Week 4 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Note
Pistol Progression
In the even weeks of this progression, the pistol squat variation will gradually become more challenging. If pistols are currently a struggle, feel free to stick with the same variation each week and focus on building control and confidence. If you're already comfortable with pistol squats, use each week to refine the fundamentals so that by Week 6, you're performing clean, controlled reps with the most advanced option. Quality comes first — progression follows good movement.

Week 4 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Note
Shoulder + Triceps
The primary muscles involved in upper body pushing are the pecs, shoulders, and triceps. Each week in the strength balance section, you'll see a dip or pushup variation to target the pecs, paired with either a shoulder raise or a triceps-focused movement. After training, and especially the

following day, pay attention to where you feel the most soreness. Because the stimulus shifts slightly week to week, one area may be challenged more than the others. Use that feedback to better understand your current weak points around the shoulder complex and to guide how you approach movements going forward.

Week 4 Day 3 - Persist PUMP LIFT 5x

A) Daily Focus Note
Back Variety
The strength balance section introduces movements that train the back in a slightly different way. Rows and pull ups/pulldowns are common for good reason — they train a large portion of the back. However, relying only on those patterns can leave some areas underworked. Today's pullovers and shrugs challenge the lats and traps from new angles. Focus on creating a big controlled stretch and a strong contraction on every rep to get the most out of these movements.
Short on Time? Remove Strength Balance

B) Warmup (8 min)
3 Rounds
90 sec Cardio of Choice
Band Pullapart; 15 reps
RNT Chainsaw Row; 6-8 reps/side

C) Strength Intensity 1 (12-15 min)
Close Grip Lat Pulldown or Neutral Grip Pull Up
Every 2:30 x 4 Working Sets

Warm-Up Set - 10 reps @ 20X1 Tempo- Easy
Working Set 1 - 12 @ 20X1 - RPE 7
Working Set 2 - 10 @ 20X1 - RPE 8
Working Set 3 - 8 @ 20X1 - RPE 9
Working Set 4 - 6 @ 20X1 - RPE 9-10 + Single Drop Set to Failure

**Loading Note:**

If using pull ups instead of pulldowns, match band or machine assistance to prescription. Each set should decrease in assistance or increase in additional weight. For the drop set, don't worry about percentages; instead, add back two levels of assistance (or less weight), similar to your first and second working sets. Perform the drop set as soon as you adjust the weight from your set of 6. RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12-15 min)
Wide Grip Barbell Row
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @ 20X0 Tempo - Easy

If it feels too challenging, return to the tuck position from Week 2. In the tuck, aim to keep both knees above the hips. In the single-leg variation, try to keep the working foot above the hip while maintaining control and posture. Choose the version you can own with good positions.

Week 4 Day 6 - Persist PUMP LIFT 5x

A) Daily Focus Note:
More Upper Back
The upper back handles fatigue well, which means it can be trained frequently throughout the week. In the strength balance section, you'll see additional rowing variations for that reason. Beyond building strength, consistent upper back work also helps support balance around the shoulder and improves overall pressing mechanics.

Week 4 Day 7 - Persist PUMP LIFT 5x
Work In Lesson

You can train four or five days a week and still not move enough.

A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in: 3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus

Week 4 Day 5 - Persist PUMP LIFT 4x

A) Daily Focus Note:
Back Variety
The strength balance section introduces movements that train the back in a slightly different way. Rows and Pull Ups/pulldowns are common for good reason — they train a large portion of the back. However, relying only on those patterns can leave some areas underworked. Today's pullovers and shrugs challenge the lats and traps from new angles. Focus on creating a big controlled stretch and a strong contraction on every rep to get the most out of these movements.

Week 4 Day 7 - Persist PUMP LIFT 4x
Work In Lesson

You can train four or five days a week and still not move enough.

A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in: 3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus

Week 4 Day 1 - Persist PUMP LIFT 3x

A) Daily Focus Note:
Dips + Deficit Pushups
Dips and deficit pushups give you one of the biggest opportunities to explore shoulder mobility in horizontal pressing. Both movements place the shoulder into deeper extension and rotation than most presses. At the bottom of each rep, move into as much stretch as you can comfortably control. Stay active in that position — don’t relax into it. Maintaining tension in the stretched range creates

a strong muscle-building stimulus while also improving usable flexibility. Controlled depth over rushed reps.

On the even weeks of this progression, the L-sit moves from a tuck position toward a straight-leg position. This week introduces the single-leg L-sit. If it feels too challenging, return to the tuck position from Week 2. In the tuck, aim to keep both knees above the hips. In the single-leg variation, try to keep the working foot above the hip while maintaining control and posture. Choose the version you can own with good positions.

Week 4 Day 2 - Persist PUMP CONDITION 5x

A) Daily Focus Note:
Shoulder + Triceps

The primary muscles involved in upper body pushing are the pecs, shoulders, and triceps. Each week in the strength balance section, you'll see a dip or pushup variation to target the pecs, paired with either a shoulder raise or a triceps-focused movement. After training, and especially the following day, pay attention to where you feel the most soreness. Because the stimulus shifts slightly week to week, one area may be challenged more than the others. Use that feedback to better understand your current weak points around the shoulder complex and to guide how you approach movements going forward.

Week 4 Day 3 - Persist PUMP CONDITION 5x

A) Daily Focus Note:
Back Variety
The strength balance section introduces movements that train the back in a slightly different way. Rows and pullups/pulldowns are common for good reason — they train a large portion of the back. However, relying only on those patterns can leave some areas underworked. Today's pullovers and rows challenge the lats from new angles. Focus on creating a big controlled stretch and a strong contraction on every rep to get the most out of these movements.

For the drop set, don't worry about percentages; instead, add back two levels of assistance (or less weight), similar to your first and second working sets. Week 4 Day 6 - Persist PUMP CONDITION 5x

A) Daily Focus Note:
Arnold Press Technique
To execute the Arnold press correctly, start by letting the elbows move away from the midline. The elbows travel from in front of the body out to the sides. Once they reach the side position, then press the weight overhead. On the way down, reverse the same path — lower to the sides first, then sweep the elbows back toward the midline. Control the motion and keep the movement smooth rather than rushing the rotation.
Short on Time? Remove Strength Balance or Conditioning

Week 4 Day 7 - Persist PUMP CONDITION 5x
Work In Lesson

You can train four or five days a week and still not move enough.
A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in:

3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus

Week 4 Day 1 - Persist PUMP CONDITION 4x

A) Daily Focus Note:
Pistol Progression
In the even weeks of this progression, the pistol squat variation will gradually become more challenging. If pistols are currently a struggle, feel free to stick with the same variation each week and focus on building control and confidence. If you're already comfortable with pistol squats, use each week to refine the fundamentals so that by Week 6, you're performing clean, controlled reps with the most advanced option. Quality comes first — progression follows good movement.
Short on Time? Remove Strength Balance or Conditioning

B) Warmup (8 min):
2 min Cardio of Choice
+
3 Sets
15 sec Cardio Sprint
Long Split Pulse; 15-20 sec/side
Shinbox Rear Leg ER; 6-8 reps/side

C) Strength Intensity (15 minutes):
Cyclist Front Squat

3 Working Sets; rest 2-3 min
Warm-Up Set - 6 reps @ 20X0 Tempo - Easy
Working Set 1 - 6 reps @ 20X0 Tempo - RPE 7
Working Set 2 - 6 reps @ 20X0 Tempo - RPE 8
Working Set 3 - 6 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion, scale of 10 where 10 is form failure

*rest 60 sec*
Single Leg Wall Sit; 15-30 sec/side
*rest 90 sec and back to 1*.
**Loading Note:**
Perform 1-2 warmup sets to determine starting weight. Aim for RPE 7-8 on the first working set, then keep the weight the same for the remainder of the sets, or increase the weight each set if looking to increase intensity. The "A" in the tempos stands for "Assisted," so, as the demo video shows, you will use your other foot to come back up.

E) Hinge + Core Intervals (15 min):
Every 3:00 x 5 Sets
Row 16/13 Calories (Male/Female)
16 Pike Leg Lift Overs (R+L = 1)

Effort Note:
Every 3 minutes, begin a new set. Complete all four movements in the listed order within the 3-minute window. This is performed as a sequence, not separate intervals. Aim to finish the work with approximately 30 seconds remaining in each 3-minute block so you can rest before the next set begins. Adjust your pace as needed to maintain consistent effort across all 5 sets.

F) Cooldown (5 min):
1-2 sets
Slantboard Jefferson Pulse; 30 sec
Reclining Hero Pose; 30 sec
Elevated Pigeon Stretch; 30 sec/side

Week 4 Day 2 - Persist PUMP CONDITION 4x

A) Daily Focus Note:
Back Variety
The strength balance section introduces movements that train the back in a slightly different way. Rows and pullups/pulldowns are common for good reason — they train a large portion of the back. However, relying only on those patterns can leave some areas underworked. Today's pullovers and rows challenge the lats from new angles. Focus on creating a big controlled stretch and a strong contraction on every rep to get the most out of these movements.
Short on Time? Remove Strength Balance

B) Warmup (8 min):
2 min Cardio of Choice
+
2-3 Sets
15 sec Cardio Sprint
DB ER on Knee; 10 reps/side

Working Set 3 - 8 @ 20X1 - RPE 9
Working Set 4 - 6 @20X1 - RPE 9-10 + Single Drop Set to Failure
**Loading Note:**
If using pull ups instead of pulldowns, match band or machine assistance to prescription. Each set should decrease in assistance or increase in additional weight. For the drop set, don't worry about percentages; instead, add back two levels of assistance (or less weight), similar to your first and second working sets. Perform the drop set as soon as you adjust the weight from your set of 6.
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Balance (10-12 min):

Week 4 Day 4 - Persist PUMP CONDITION 4x

A) Daily Focus Note:
L Sit Progression
On the even weeks of this progression, the L-sit moves from a tuck position toward a straight-leg position. This week introduces the single-leg L-sit. If it feels too challenging, return to the tuck position from Week 2. In the tuck, aim to keep both knees above the hips. In the single-leg variation, try to keep the working foot above the hip while maintaining control and posture. Choose the version you can own with good positions.

Week 4 Day 1 - Persist PUMP CONDITION 3x

A) Daily Focus Note:
Shoulder + Triceps
The primary muscles involved in upper body pushing are the pecs, shoulders, and triceps. Each week in the strength balance section, you'll see a dip or pushup variation to target the pecs, paired

with either a shoulder raise or a triceps-focused movement. After training, and especially the following day, pay attention to where you feel the most soreness. Because the stimulus shifts slightly week to week, one area may be challenged more than the others. Use that feedback to better understand your current weak points around the shoulder complex and to guide how you approach movements going forward.

Week 4 Day 7 - Persist PUMP CONDITION 3x
Work In Lesson

You can train four or five days a week and still not move enough.

A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in: 3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus

Week 4 Day 1 - Persist PERFORM

A) Daily Focus Note:
Pistol Progression
In the even weeks of this progression, the pistol squat variation will gradually become more challenging. If pistols are currently a struggle, feel free to stick with the same variation each week and focus on building control and confidence.  If you're already comfortable with pistol squats, use each week to refine the fundamentals so that by Week 6, you're performing clean, controlled reps with the most advanced option.  Quality comes first — progression follows good movement.

Week 4 Day 2 - Persist PERFORM

A) Daily Focus Note:
Shoulder + Triceps
The primary muscles involved in upper body pushing are the pecs, shoulders, and triceps. Each week in the strength balance section, you'll see a dip or pushup variation to target the pecs, paired with either a shoulder raise or a triceps-focused movement. After training, and especially the following day, pay attention to where you feel the most soreness. Because the stimulus shifts slightly week to week, one area may be challenged more than the others. Use that feedback to better understand your current weak points around the shoulder complex and to guide how you approach movements going forward.

Week 4 Day 3 - Persist PERFORM

A) Daily Focus Note:
Back Variety
The strength balance section introduces movements that train the back in a slightly different way. Rows and pullups/pulldowns are common for good reason — they train a large portion of the back. However, relying only on those patterns can leave some areas underworked. Today's pullovers and

rows challenge the lats from new angles. Focus on creating a big controlled stretch and a strong contraction on every rep to get the most out of these movements.
Short on Time? Remove Strength Balance

B) Warmup (8 min):

Working Set 4 - 6 @20X1 - RPE 9-10 + Single Drop Set to Failure
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.
**Loading Note:**
If using pull ups instead of pulldowns, match band or machine assistance to prescription. Each set should decrease in assistance or increase in additional weight. For the drop set, don't worry about percentages; instead, add back two levels of assistance (or less weight), similar to your first and second working sets. Perform the drop set as soon as you adjust the weight from your set of 6.

Week 4 Day 6 - Persist PERFORM

A) Daily Focus Note:
Arnold Press Technique
To execute the Arnold press correctly, start by letting the elbows move away from the midline. The elbows travel from in front of the body out to the sides. Once they reach the side position, then press the weight overhead.  On the way down, reverse the same path — lower to the sides first, then sweep the elbows back toward the midline.  Control the motion and keep the movement smooth rather than rushing the rotation.

Week 4 Day 7 - Persist PERFORM
Work In Lesson

You can train four or five days a week and still not move enough.

A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in: 3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus

Week 4 Day 7 - Persist Minimalist
Work In Lesson

You can train four or five days a week and still not move enough.

A lot of people work hard for 60–90 minutes in the gym — then sit for the other 10–12 hours they're awake. That gap matters more than you think. That's where the 3/60/10 formula comes in: 3 focused strength sessions per week 60 total minutes of cardio 10,000 steps per day

That combination keeps you strong, supports recovery, improves work capacity, and builds the aerobic base that makes lifting feel better — not harder.

Sometimes the missing piece isn't another lifting day. It's what you do between workouts.
This week, regardless of which track or training frequency you're following, I encourage you to pay attention to your movement outside the gym. Get your steps in, play with your kids, park further away. It all adds up.

With love,
Marcus
