Pump Lift 5x

Monday, June 1st, 2026

Week 5 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Toes Elevated RDL
Elevating the toes shifts the emphasis deeper into the hamstrings and glutes by letting you push the hips further back without falling onto your heels. Make that your number one cue — push the hips back, especially once the weight reaches knee level.
Short on time? Remove Finisher.

2 min Cardio of Choice
-

Week 5 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Notes: Week 5 — Chest Complex
This complex is a mechanical drop set. You perform back-to-back exercises without changing the weight — instead, you change the movement. It starts with the hardest variation (DB fly) and progresses to the most mechanically advantageous (narrow DB bench press). The weight will feel

light for the bench press on its own, but the fatigue from the flys ensures you still get a strong stimulus.
Short on time? Remove Finisher.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Prone BTN Press; 6-8 reps
3. Bent Over Row Isometrics; 15sec

C) Strength Intensity 1 (15 min):

Working Set 2 - 8 reps @ 20X0 Tempo - RPE 8
Working Set 3 - 6 reps @20X0 Tempo - RPE 9

Week 5 Day 3 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Rear Delts
Rear delts are the focus in the strength balance section. When performing rear delt exercises, don't stress about isolating the muscle perfectly — other muscles like the lats and upper back will contribute, and that's okay. As long as you feel fatigue on the back side of the shoulder as the primary sensation, you're on the right track.
Short on time? Remove Finisher.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. DB Seated Goodmorning 8-12 reps
3. Split Stance Dual KB Row; 6-8 reps/side

C) Strength Intensity 1 (15 min):
6 sets; rest 30-45sec rest between sets
Supinated Lat Pulldown or Supinated Strict Pull Up; 6 reps @ 20X0 Tempo

Loading Note:
If using Pull Ups instead of pulldowns, match band or machine assistance to prescription. This is a high density format, meaning a lot of reps with little rest. Select a weight or band assistance that is consistent with 12-15 rep max for the prescribed movement. RPE for set 1 should be at about a 6, as this will get more challenging with each set.
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12-15 min):
Incline Prone Dumbbell Row
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @ 20X0 Tempo - Easy
Working Set 1 - 10 reps @ 20X0 Tempo - RPE 7
Working Set 2 - 8 reps @ 20X0 Tempo - RPE 8
Working Set 3 - Max Unbroken reps @20X0 Tempo - RPE 10 - Set 1 weight.

1. RNT Single Arm Dumbbell Row; 6-8 reps/side @ 21X1 Tempo
- rest 30 sec
2. Dumbbell Bent Over Reverse Fly; 10-12 reps @ 30X0 Tempo

1. Cross Body Hammer Curl; 6-8 reps/side @21X1

2. Childs Pose Lat Stretch x 30 sec/side

Week 5 Day 5 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Reverse Nordics
The reverse nordic is one of the best quad exercises available, especially without a knee extension machine. Press your shins actively into the ground as you lower back and keep the hips as straight as possible throughout. Even a small range of motion will create a big stimulus — don't worry if mobility limits you at first.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Single Leg Hip Bridge Hold; 30 sec/side
2. Alternating Single Arm Split Stance KB Swing x 6-10 reps/side

Saturday, June 6th, 2026

Week 5 Day 6 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
DB Lateral Raise into Yoga Push Up
You don't need to do yoga to benefit from yoga Push Ups. This variation blends a traditional Push Up with elements of a handstand Push Up, turning a chest-dominant movement into a shoulder-dominant one. The lateral raises beforehand build fatigue so you can feel the shoulders working more during the Push Ups. Use that activation to get the most out of every rep.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Glute Bridge DB Bench Press; 10 reps
2. Half Kneeling Cable or Band Row; 10 reps/side

C) Strength Intensity 1 (15 min):
Spoto Press
4 Working Sets; rest 2-3 min
Warm-Up Set - 6 reps @ 22X1 Tempo - Easy
Warm-Up Set - 5 reps @ 22X1 Tempo - Easy
Working Set 1 - 3 reps @ 22X1 Tempo - RPE 7
Working Set 2 - 3 reps @ 22X1 Tempo - RPE 8
Working Set 3 - 3 reps @22X1 Tempo - RPE 9
Working Set 4 - Max Unbroken reps @22X1 Tempo - RPE 10 - Set 1 weight.
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12-15 min):
3 sets
1. Pronated Pull Up Isometric; 15-20sec
- rest 15 sec
2. Pronated Strict Pull Up; 5-10 reps @21X2
- rest 90 sec and back to 1.

Loading Note:
The Pull Up isometric is potentiating the regular Pull Ups. The Pull Up isometric should be "heavier" than the regular Pull Up. If you are able to complete 5-10 Tempo Bodyweight Pull Ups, add weight on the Pull Up isometric. If you are using band assistance for the tempo Pull Ups, attempt to perform the Pull Up isometric with bodyweight only.

E) Strength Balance (12 min):
3 sets
1. Dumbbell Lateral Raise; 12-15 reps @ 30X0 Tempo
- rest 30 sec
2. Yoga Push Up; 6-10 reps

Week 5 Day 7 - Persist PUMP LIFT 5x

We like to think it's all about discipline, but your environment plays a bigger role than most people realize. If your schedule is chaotic and your kitchen isn't set up well, you're constantly fighting an uphill battle.

Set things up so the right choices are easier. Do some meal prep for the week, stock your fridge with healthy snacks, lay out your workout clothes the night before - reduce friction wherever you can. When your environment is aligned, consistency stops feeling like a constant battle.

Warmly,
Marcus

Week 5 Day 5 - Persist PUMP LIFT 4x

A) Daily Focus Notes:
Pike Handstand Hold
Calisthenics are one of the most underrated tools for building muscle. No matter the prescription — push ups, pull ups, dips — they're almost always challenging, and the progressions are endless. The pike handstand hold asks you to isometrically support your bodyweight through the shoulders and triceps after they're already fatigued from the prior exercises. Actively push the ground away to maximize shoulder activation.

Week 5 Day 7 - Persist PUMP LIFT 4x

We like to think it's all about discipline, but your environment plays a bigger role than most people realize. If your schedule is chaotic and your kitchen isn't set up well, you're constantly fighting an uphill battle.

Set things up so the right choices are easier. Do some meal prep for the week, stock your fridge with healthy snacks, lay out your workout clothes the night before - reduce friction wherever you can. When your environment is aligned, consistency stops feeling like a constant battle.

Warmly,
Marcus

Week 5 Day 3 - Persist PUMP LIFT 3x

A) Daily Focus Notes:
Abductors and Adductors
The strength balance section this block explores a lot of adductor and abductor work. These muscles make up more of the lower body than most people realize and are essential for strong squatting and hinging. When you superset them with squats or hinges, the fatigue gives you immediate feedback — you'll feel those muscles working in the compound lift in a way you might not normally notice. Use that awareness to get more out of each rep.
Short on time? Remove Finisher.

Week 5 Day 1 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Toes Elevated RDL
Elevating the toes shifts the emphasis deeper into the hamstrings and glutes by letting you push the hips further back without falling onto your heels. Make that your number one cue — push the hips back, especially once the weight reaches knee level.
Short on time? Remove Strength Balance or Conditioning based on your goals.

1-2 sets
1. Foot Elevated Hamstring Stretch; 30 sec/side
2. Dynamic Couch Stretch; 30 sec/side
3. Hip Sleeper Stretch; 30 sec/side

Week 5 Day 2 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Chest Complex
This complex is a mechanical drop set. You perform back-to-back exercises without changing the weight — instead, you change the movement. It starts with the hardest variation (DB fly) and progresses to the most mechanically advantageous (narrow DB bench press). The weight will feel light for the bench press on its own, but the fatigue from the flys ensures you still get a strong stimulus.

Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Prone BTN Press; 6-8 reps
3. Bent Over Row Isometrics; 15sec

Working Set 3 - 6 reps @ 20X0 Tempo - RPE 9
Working Set 4 - Max Unbroken reps @ 20X0 Tempo - RPE 10 - Set 1 weight.
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Balance (10-12 min):

1. Incline DB Fly; 6-8 reps @30X0 Tempo

2. Incline DB Bench Press; 6-8 reps @ 30X0 Tempo

3. Incline Narrow Grip Bench Press; 6-8 reps @30X0 Tempo
- rest 2min and back to 1.

10-12 Strict Bar Dip or Ring Dip
6 Burpee Over Rower
12/10 Calorie Row (Male/Female)
Effort Note:
The goal is to accumulate as many QUALITY dips as possible. Keep the pace consistent on the Row as this will act as the rest for your upper body pressing muscles.

F) Cooldown (5 min):
1-2 sets
1. Theraband Around the World; 6-10 reps
2. Supinated Passive Hang; 30 sec
3. PVC Shoulder Extension Stretch; 30-60 sec

Wednesday, June 3rd, 2026

Week 5 Day 3 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Incline Prone Row and Reverse Fly
The incline prone row and reverse fly target the same region but from different angles. The row builds thickness through the mid-back and lats, while the fly zeroes in on the rear delts and upper traps — muscles that get undertrained when rows dominate the pulling work. Pairing them back to back keeps the upper back under sustained load, so keep the weights honest and let the fatigue do the work.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. DB Seated Goodmorning 8-12 reps
3. Split Stance Dual KB Row; 6-8 reps/side

C) Strength Intensity (15 min):
6 sets; rest 30-45sec between sets
Supinated Lat Pulldown or Supinated Strict Pull Up; 6 reps @ 20X0 Tempo
Loading Note:
If using Pull Ups instead of pulldowns, match band or machine assistance to prescription. This is a high density format, meaning a lot of reps with little rest. Select a weight or band assistance that is consistent with 12-15 rep max for the prescribed movement.

D) Strength Balance (10-12 min):
3 sets
1. Incline Prone DB Row; 8 reps @ 21X1 Tempo
- rest 30 sec
2. DB Bent Over Reverse Fly; 10-12 reps @ 30X0 Tempo

The reverse nordic is one of the best quad exercises available, especially without a knee extension machine. Press your shins actively into the ground as you lower back and keep the hips as straight as possible throughout. DB Lateral Raise into Yoga Push Up

You don't need to do yoga to benefit from yoga push ups. This variation blends a traditional push up with elements of a handstand push up, turning a chest-dominant movement into a shoulder-dominant one. The lateral raises beforehand build fatigue, so you can feel the shoulders working more during the push ups. Use that activation to get the most out of every rep.

Week 5 Day 7 - Persist PUMP CONDITION 5x

We like to think it's all about discipline, but your environment plays a bigger role than most people realize. If your schedule is chaotic and your kitchen isn't set up well, you're constantly fighting an uphill battle.

Set things up so the right choices are easier. Do some meal prep for the week, stock your fridge with healthy snacks, lay out your workout clothes the night before - reduce friction wherever you can. When your environment is aligned, consistency stops feeling like a constant battle.

Warmly,
Marcus

Week 5 Day 2 - Persist PUMP CONDITION 4x

A) Daily Focus Notes:
Incline Dumbbell Prone Row and Reverse Fly
The incline prone row and reverse fly target the same region but from different angles. The row builds thickness through the mid-back and lats, while the fly zeroes in on the rear delts and upper traps — muscles that get undertrained when rows dominate the pulling work. Pairing them back to back keeps the upper back under sustained load, so keep the weights honest and let the fatigue do the work.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Prone BTN Press; 6-8 reps

Week 5 Day 4 - Persist PUMP CONDITION 4x

A) Daily Focus Notes:
Reverse Nordics
The reverse nordic is one of the best quad exercises available, especially without a knee extension machine. Press your shins actively into the ground as you lower back and keep the hips as straight as possible throughout. Even a small range of motion will create a big stimulus — don't worry if mobility limits you at first.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Single Leg Hip Bridge Hold; 30 sec/side

Week 5 Day 5 - Persist PUMP CONDITION 4x

A) Daily Focus Notes:
Pike Handstand Hold
Calisthenics are one of the most underrated tools for building muscle. No matter the prescription — push ups, pull ups, dips — they're almost always challenging, and the progressions are endless. The pike handstand hold asks you to isometrically support your bodyweight through the shoulders and triceps after they're already fatigued from the prior exercises. Actively push the ground away to maximize shoulder activation.
Short on time? Remove Strength Balance or Conditioning based on your goals.

Week 5 Day 1 - Persist PUMP CONDITION 3x

A) Daily Focus Notes:
Strict Press Progression
This block alternates between the DB strict press and the back supported barbell strict press. Each one enhances the other — the DB press demands more coordination and works each side individually, while the back supported barbell press provides stability so you can prioritize moving heavier loads.

A) Daily Focus Notes:
Incline Prone Row and Reverse Fly
The incline prone row and the reverse fly target the same general region but from different angles. The row builds thickness through the mid-back and lats, while the reverse fly isolates the rear delts and upper traps — muscles that often get undertrained when rows dominate the pulling work. Pairing them back to back keeps the upper back under consistent load. You'll feel the fatigue compound quickly, so keep the weights honest. The rear fly should feel like a challenge, not a grind through poor positions.

Week 5 Day 5 - Persist PUMP CONDITION 3x

A) Daily Focus Notes:
Chest Complex
This complex is a mechanical drop set. You perform back-to-back exercises without changing the weight — instead, you change the movement. It starts with the hardest variation (DB fly) and progresses to the most mechanically advantageous (narrow DB bench press). The weight will feel light for the bench press on its own, but the fatigue from the flys ensures you still get a strong stimulus.
Short on time? Remove Strength Balance or Conditioning based on your goals.

Week 5 Day 3 - Persist PERFORM

A) Daily Focus Notes:
Incline Prone Row and Reverse Fly
The incline prone row and reverse fly target the same region but from different angles. The row builds thickness through the mid-back and lats, while the fly zeroes in on the rear delts and upper traps — muscles that get undertrained when rows dominate the pulling work. Pairing them back to back keeps the upper back under sustained load, so keep the weights honest and let the fatigue do the work.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. DB Seated Goodmorning 8-12 reps
3. Split Stance Dual KB Row; 6-8 reps/side

C) Strength Intensity (15 min):
6 sets; rest 30-45sec between sets
Supinated Lat Pulldown or Supinated Strict Pull Up; 6 reps @ 20X0 Tempo
Loading Note:
If using pull ups instead of pulldowns, match band or machine assistance to prescription. This is a high density format, meaning a lot of reps with little rest. Select a weight or band assistance that is consistent with 12-15 rep max for the prescribed movement.

D) Strength Balance (10-12 min):
3 sets
1. Incline Prone DB Row; 8 reps @ 21X1 Tempo
- rest 30 sec
1. DB Bent Over Reverse Fly; 10-12 reps @ 30X0 Tempo

Week 5 Day 5 - Persist PERFORM

A) Daily Focus Notes:
Reverse Nordics
The reverse nordic is one of the best quad exercises available, especially without a knee extension machine. Press your shins actively into the ground as you lower back and keep the hips as straight as possible throughout. Even a small range of motion will create a big stimulus — don't worry if mobility limits you at first.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice

Week 5 Day 6 - Persist PERFORM

A) Daily Focus Notes:
DB Lateral Raise into Yoga Push Up
You don't need to do yoga to benefit from yoga pushups. This variation blends a traditional push up with elements of a handstand push up, turning a chest-dominant movement into a shoulder-dominant one. The lateral raises beforehand build fatigue, so you can feel the shoulders working more during the push ups. Use that activation to get the most out of every rep.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Glute Bridge DB Bench Press; 10 reps

Week 5 Day 7 - Persist PERFORM

We like to think it's all about discipline, but your environment plays a bigger role than most people realize. If your schedule is chaotic and your kitchen isn't set up well, you're constantly fighting an uphill battle.

Set things up so the right choices are easier. Do some meal prep for the week, stock your fridge with healthy snacks, lay out your workout clothes the night before - reduce friction wherever you can. When your environment is aligned, consistency stops feeling like a constant battle.

Warmly,
Marcus

Week 5 Day 1 - Persist Minimalist

A) Daily Focus Notes:
Toes Elevated RDL
Elevating the toes shifts the emphasis deeper into the hamstrings and glutes by letting you push the hips further back without falling onto your heels. Make that your number one cue — push the hips back, especially once the weight reaches knee level.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):

Week 5 Day 5 - Persist Minimalist

A) Daily Focus Notes:
Pike Handstand Hold
Calisthenics are one of the most underrated tools for building muscle. No matter the prescription — push ups, pull ups, dips — they're almost always challenging, and the progressions are endless. The pike handstand hold asks you to isometrically support your bodyweight through the shoulders and triceps after they're already fatigued from the prior exercises. Actively push the ground away to maximize shoulder activation.
Short on time? Remove Strength Balance or Conditioning based on your goals.
