Week 6 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Abductors and Adductors
The strength balance section this block explores a lot of adductor and abductor work. These muscles make up more of the lower body than most people realize and are essential for strong squatting and hinging.
When you superset them with squats or hinges, the fatigue gives you immediate feedback — you'll feel those muscles working in the compound lift in a way you might not normally notice. Use that awareness to get more out of each rep.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 15 sec Cardio Sprint
2. Banded Reverse Nordics; 6-8 reps

Week 6 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
DB Press into DB Fly
This superset pairs a heavy stimulus (DB press) with a deep stretch emphasis (DB fly). Keep those priorities clear for each movement — heavy on the press, stretch on the fly. The combination of load and lengthened position creates a potent stimulus for the shoulders and chest.
Short on time? Remove Finisher.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Bulgarian Ring Row; 6-8 reps
3. Half Kneeling Bottoms Up KB Press; 6-8 reps/side

Week 6 Day 3 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Density Set Progression
Throughout this block, the reps and sets for the density sets stay the same. The goal is progressive improvement — either performing more quality reps over time or gradually increasing the weight week to week.
Short on time? Remove Finisher.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2\. DB Zercher Goodmorning; 6-8 reps

Working Set 4 - Drop back to your Set 1 weight/assistance and perform Max Unbroken reps @20X1 (Aim for 8+ reps)

Loading Note:

If using Pull Ups instead of pulldowns, match band or machine assistance to prescription. Each set should decrease in assistance or increase in additional weight. For Set 4, drop back to your set 1 weight or assistance and perform as many reps as possible, aiming for 8 or more reps.

D) Strength Intensity 2 (12-15 min):
6 sets; rest 30-45sec rest between sets
T-Bar Row; 6 reps @ 20X0 Tempo

Week 6 Day 5 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Kas Glute Bridge
The Kas glute bridge is intentionally partial range of motion. While we almost always prioritize full range, this variation keeps constant tension on the glutes with no break at all. In a traditional hip thrust, the glutes get a brief rest at the bottom — the Kas bridge eliminates that entirely, creating a very high time-under-tension stimulus.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Alternating Landmine Rotational Deadlift; 6/side
2. Landmine Zercher Forward Lunge; 6-10/side

C) Strength Intensity 1 (15 min):
Snatch Grip Romanian Deadlift
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @ 20X0 Tempo - Easy
Working Set 1 - 6 reps @ 20X0 Tempo - RPE 7
Working Set 2 - 6 reps @ 20X0 Tempo - RPE 8

Suitcase Rear Foot Elevated Split Squat
3 Working Sets; rest 2-3 min
Warm-Up Set - 8 reps/side @ 20X0 Tempo - Easy

Week 6 Day 6 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Bench Press Progression
This block builds toward a heavy bench press but keeps the 22X1 tempo throughout the entire cycle. Don't expect to hit a personal best with this tempo — that's not the goal. The strength you've built in the bottom position over these six weeks should set you up nicely to hit some personal bests in the months ahead.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-

3 Sets
1. 90/90 Alternating DB Floor Press; 6 reps/side
2. Tall Kneeling KB Halo; 6 reps/side

C) Strength Intensity 1 (15 min):
Barbell Bench Press
4 Working Sets; rest 2-3 min
Warm-Up Set - 6 reps @ 22X1 Tempo - Easy
Warm-Up Set - 5 reps @ 22X1 Tempo - Easy
Working Set 1 - 3 reps @ 22X1 Tempo - RPE 7
Working Set 2 - 3 reps @ 22X1 Tempo - RPE 8
Working Set 3 - 3 reps @22X1 Tempo - RPE 9
Working Set 4 - Max Unbroken reps @22X1 Tempo - RPE 10 - Set 1 weight.
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12-15 min):
3 sets
1. Supinated Pull Up Isometric; 15-20sec
- rest 15 sec
2. Supinated Strict Pull Up; 5-10 reps @21X2 Tempo
- rest 90 sec and back to 1.

Loading Note:
The Pull Up isometric is potentiating the regular Pull Ups. The Pull Up isometric should be "heavier" than the regular Pull Up. If you are able to complete 5-10 Tempo Bodyweight Pull Ups, add weight to the Pull Up isometric. If you are using band assistance for the tempo Pull Ups, attempt to perform the Pull Up isometric with bodyweight only.

E) Strength Balance (12 min):
3 sets
1. Seated DB Lateral Raise; 12-15 reps @ 30X0 Tempo
- rest 30 sec
2. Pike Handstand Hold 15-25sec or Pike Strict Handstand Push Up; 5-8 reps @20X0 Tempo
- rest 60-90 sec and back to 1.

Loading Note:
Perform 1-2 warmup sets to determine starting weight. Aim for each set to be close to form failure

F) Finisher (8-10 min):
2-3 sets
1. Incline Y Raise; 10-12 @30X0

- rest 30 sec
2. Dumbbell Side Bend; 10-12 reps/side @20X0
- rest 75-90sec and back to 1

Loading Note;
Aim for each set to be close to failure.

G) Cooldown (5 min):

Week 6 Day 7 - Persist PUMP LIFT 5x

Not every week is going to come with more weight on the bar or a noticeable change in the mirror. That doesn't mean it's not working. Progress often shows up later than you expect (and want), and if you're only looking for immediate feedback, you'll miss it.

There's a lag between the work you're putting in and the results you can see. You might be doing everything right for weeks before it finally clicks - then suddenly the scale drops, you finally get that PR, or things start to look different. That's why trusting the process matters. Stick with it long enough for your effort to actually show up.

Warmly,
Marcus

Week 6 Day 5 - Persist PUMP LIFT 4x

A) Daily Focus Notes:
Bench Press Progression
This block builds toward a heavy bench press but keeps the Tempo throughout the entire cycle. Don't expect to hit a personal best with the added Tempo — that's not the goal. The strength you've built in the bottom position over these six weeks should set you up nicely to hit some personal bests in the months ahead.
Short on time? Remove Finisher.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 90/90 Alternating DB Floor Press; 6 reps/side
2. Tall Kneeling KB Halo; 6 reps/side

Loading Note:
The Pull Up isometric is potentiating the regular Pull Ups. The Pull Up isometric should be "heavier" than the regular Pull Up. If you are able to complete 5-10 Tempo Bodyweight Pull Ups, add weight to the Pull Up isometric. If you are using band assistance for the tempo Pull Ups, attempt to perform the Pull Up isometric with bodyweight only.

E) Strength Balance (12 min):
3 sets
1. Dumbbell Full Raise; 10 reps @ 30X0 Tempo
- rest 30 sec
1. Strict Bar Dip; 6-10 reps @30X0 Tempo

Week 6 Day 7 - Persist PUMP LIFT 4x

Not every week is going to come with more weight on the bar or a noticeable change in the mirror. That doesn't mean it's not working. Progress often shows up later than you expect (and want), and if you're only looking for immediate feedback, you'll miss it.

There's a lag between the work you're putting in and the results you can see. You might be doing everything right for weeks before it finally clicks - then suddenly the scale drops, you finally get that PR, or things start to look different. That's why trusting the process matters. Stick with it long enough for your effort to actually show up.

Warmly,
Marcus

Week 6 Day 1 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Abductors and Adductors
The strength balance section of this block explores a lot of adductor and abductor work. These muscles make up more of the lower body than most people realize and are essential for strong squatting and hinging.
When you superset them with squats or hinges, the fatigue gives you immediate feedback — you'll feel those muscles working in the compound lift in a way you might not normally notice. Use that awareness to get more out of each rep.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 15 sec Cardio Sprint

Effort Note:
Move quickly, but with quality through the DB movements. In the remaining of each 60sec interval, complete as many calories as possible on the rower. Keep track of the total calories you complete.

F) Cooldown (5 min):
1-2 sets
1. Foot Elevated Hip Flexion Stretch; 30 sec/side
2. Butterfly Stretch; 60 sec
3. Shinbox Switch; 5 reps/side

Week 6 Day 2 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
DB Bench Press into DB Fly
This superset pairs a heavy stimulus (DB Bench press) with a deep stretch emphasis (DB fly). Keep those priorities clear for each movement — heavy on the press, stretch on the fly. The combination of load and lengthened position creates a potent stimulus for the shoulders and chest.

Short on time? Remove Strength Balance or Conditioning based on your goals.

Week 6 Day 5 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Kas Glute Bridge
The Kas glute bridge is intentionally partial range of motion. While we almost always prioritize full range, this variation keeps constant tension on the glutes with no break at all. In a traditional hip thrust, the glutes get a brief rest at the bottom — the Kas bridge eliminates that entirely, creating a very high time-under-tension stimulus.
Short on time? Remove Strength Balance or Conditioning based on your goals.

Week 6 Day 6 - Persist PUMP CONDITION 5x

A) Daily Focus Notes:
Bench Press Progression
This block builds toward a heavy bench press but keeps the 22X1 tempo throughout the entire cycle. Don't expect to hit a personal best with this tempo — that's not the goal. The strength you've built in the bottom position over these six weeks should set you up nicely to hit some personal bests in the months ahead.
Short on time? Remove Strength Balance or Conditioning based on your goals.

Week 6 Day 7 - Persist PUMP CONDITION 5x

Not every week is going to come with more weight on the bar or a noticeable change in the mirror. That doesn't mean it's not working. Progress often shows up later than you expect (and want), and if you're only looking for immediate feedback, you'll miss it.

There's a lag between the work you're putting in and the results you can see. You might be doing everything right for weeks before it finally clicks - then suddenly the scale drops, you finally get that PR, or things start to look different. That's why trusting the process matters. Stick with it long enough for your effort to actually show up.

Warmly,
Marcus

Week 6 Day 1 - Persist PUMP CONDITION 4x

A) Daily Focus Notes:
Abductors and Adductors
The strength balance section this block explores a lot of adductor and abductor work. These muscles make up more of the lower body than most people realize and are essential for strong squatting and hinging.
When you superset them with squats or hinges, the fatigue gives you immediate feedback — you'll feel those muscles working in the compound lift in a way you might not normally notice. Use that awareness to get more out of each rep.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice

Week 6 Day 4 - Persist PUMP CONDITION 4x

A) Daily Focus Notes: Week 6 — Kas Glute Bridge
The Kas glute bridge is intentionally partial range of motion. While we almost always prioritize full range, this variation keeps constant tension on the glutes with no break at all. In a traditional hip thrust, the glutes get a brief rest at the bottom — the Kas bridge eliminates that entirely, creating a very high time-under-tension stimulus.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):

Week 6 Day 1 - Persist PUMP CONDITION 3x

A) Daily Focus Notes:
Back Supported Pressing
The back support provides core stability, but the bigger benefit is that you can lean slightly into the bench. If shoulder mobility limits you overhead, this variation lets you press safely without needing to get the bar fully behind your head at the top.

Week 6 Day 7 - Persist PUMP CONDITION 3x

Not every week is going to come with more weight on the bar or a noticeable change in the mirror. That doesn't mean it's not working. Progress often shows up later than you expect (and want), and if you're only looking for immediate feedback, you'll miss it.

There's a lag between the work you're putting in and the results you can see. You might be doing everything right for weeks before it finally clicks - then suddenly the scale drops, you finally get that PR, or things start to look different. That's why trusting the process matters. Stick with it long enough for your effort to actually show up.

Warmly,
Marcus

Week 6 Day 1 - Persist PERFORM

A) Daily Focus Notes:
Abductors and Adductors
The strength balance section this block explores a lot of adductor and abductor work. These muscles make up more of the lower body than most people realize and are essential for strong squatting and hinging.
When you superset them with squats or hinges, the fatigue gives you immediate feedback — you'll feel those muscles working in the compound lift in a way you might not normally notice. Use that awareness to get more out of each rep.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-

Week 6 Day 2 - Persist PERFORM

A) Daily Focus Notes:
DB Press into DB Fly
This superset pairs a heavy stimulus (DB press) with a deep stretch emphasis (DB fly). Keep those priorities clear for each movement — heavy on the press, stretch on the fly. The combination of load and lengthened position creates a potent stimulus for the shoulders and chest.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Bulgarian Ring Row; 6-8 reps

Week 6 Day 5 - Persist PERFORM

A) Daily Focus Notes:
Kas Glute Bridge
The Kas glute bridge is intentionally partial range of motion. While we almost always prioritize full range, this variation keeps constant tension on the glutes with no break at all. In a traditional hip thrust, the glutes get a brief rest at the bottom — the Kas bridge eliminates that entirely, creating a very high time-under-tension stimulus.
Short on time? Remove Strength Balance or Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Alternating Landmine Rotational Deadlift; 6/side

-
Every 90-120sec x 5-6 sets

Week 6 Day 6 - Persist PERFORM

A) Daily Focus Notes:
Bench Press Progression
This block builds toward a heavy bench press but keeps the tempo throughout the entire cycle. Don't expect to hit a personal best with the added tempo — that's not the goal. The strength you've built in the bottom position over these six weeks should set you up nicely to hit some personal bests in the months ahead.

Week 6 Day 7 - Persist Minimalist

Not every week is going to come with more weight on the bar or a noticeable change in the mirror. That doesn't mean it's not working. Progress often shows up later than you expect (and want), and if you're only looking for immediate feedback, you'll miss it.

There's a lag between the work you're putting in and the results you can see. You might be doing everything right for weeks before it finally clicks - then suddenly the scale drops, you finally get that PR, or things start to look different. That's why trusting the process matters. Stick with it long enough for your effort to actually show up.

Warmly,
Marcus
