Pump Lift 5x

Monday, July 13th, 2026

Week 1 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Notes: Conventional Deadlift
The conventional deadlift opens this cycle as the primary hinge. Five reps across three working sets, building from RPE 7 to 9. Keep the hips level at the start of each pull. If they shoot up before the bar moves, the lower back takes over from the legs. Brace hard before the bar leaves the floor and hold that brace through the entire rep. Reps drop each odd week, which means weight goes up. Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Crush Grip Rotational Deadlift; 5 reps/side
2. Renegade Row; 5-8 reps/side

C) Strength Intensity 1 (15 min):
Conventional Deadlift
3 Working Sets; rest 2-3 min
Warm-Up Set - 5 reps @20X0 Tempo - Easy
Warm-Up Set - 5 reps @20X0 Tempo - Easy
Working Set 1 - 5 reps @20X0 Tempo - RPE 7
Working Set 2 - 5 reps @20X0 Tempo - RPE 8
Working Set 3 - 5 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12 min):
Pendlay Row
Every 2:30 x 4 Working Sets

Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 10 @20X1 Tempo - RPE 7
Working Set 2 - 8 @20X1 Tempo - RPE 8
Working Set 3 - 6 @20X1 Tempo - RPE 9
Working Set 4 - Drop back to your Set 1 weight and perform Max Unbroken reps @20X1 Tempo (Aim for 8+ reps)

E) Strength Balance (10 min):
Supinated Strict Pull Up
Every 75 sec x 6 sets
Set 1: 5 reps @21X0 Tempo - RPE 8
Set 2: 3 reps @21X0 Tempo - RPE 8
Set 3: 2 reps @21X0 Tempo - RPE 8
Set 4: 5 reps @21X0 Tempo - RPE 9
Set 5: 3 reps @21X0 Tempo - RPE 9
Set 6: 2 reps @21X0 Tempo - RPE 9
Loading Note:
As reps go down, make your pull-ups harder by adding weight or using less assistance. The goal of this session is to work on heavy/challenging pull ups. The first three sets should be lighter or easier than the last three sets.

F) Finisher (8 min):
Barbell Curl
6 sets:
Every 45-60sec x 6 reps @20X0 Tempo
Loading Note:
Select a weight that feels about RPE 7-8 on the first set.

G) Cooldown (5 min):
1-2 sets
1. Lumbar Roll to Pancake Stretch; 5 reps with 5 sec stretch
2. Single Arm Wall Prayer Stretch x 30 sec/side
3. Pigeon Stretch; 30-60 sec/side

Week 1 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Incline Bench Press

The incline bench press shifts the emphasis higher on the chest and onto the front of the shoulder compared to the flat bench. Keep the bar path angled back toward the upper chest, not straight down. The 20X1 tempo means the bar moves at a controlled pace on the way down, no pause at the bottom, then drives up. Reps drop each odd week across the cycle, so each time this comes back, the weight should go up.
Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 15 sec Cardio Sprint
2. 1/2 Turkish Get Up; 5 reps/side
3. Band Pull Apart; 20 reps

C) Strength Intensity 1 (15 min):

rest 45 sec
2. Bent Over Reverse Fly; 12-15 reps @20X0 Tempo

Week 1 Day 3 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Cyclist Back Squat
The cyclist squat elevates the heels, which shifts the load forward onto the quads. Keep the torso as upright as possible and let the knees track forward over the toes. That is exactly what the heel elevation is there for. Reps drop during the odd weeks of this cycle, so weight goes up each time it comes back. If the weight feels manageable early, stay patient. The RPE climbs fast across the working sets.
Short on time? Remove Finisher

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Curtsy Squat; 10 reps/side
3. Theraband Glute Bridge; 15-20 reps

Week 1 Day 5 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Seated Filly Press
The Seated Filly Press is a single arm pressing movement performed seated. One arm presses while the other holds the kettlebell in a front rack position. A common mistake is letting the elbow on the racked arm rise up. Keep that elbow pointing down. It still works the shoulder and actually creates more core activation through that lateral shift. The pressing arm works through its full range while the racked arm holds the body accountable. The max unbroken drop set at the end of Set 4 uses the Set 1 weight. By that point the pressing muscles have already climbed through three sets of increasing difficulty.
Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice

Saturday, July 18th, 2026

Week 1 Day 6 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Zercher Split Squat
The Zercher split squat holds the bar in the crook of the elbows rather than on the back or in the hands. That front load position shifts the center of gravity forward, which demands more from the core and upper back to keep the torso upright. Drop straight down into the split squat rather than letting the front knee drift forward past the foot. Reps drop each odd week across the cycle, which means weight goes up each time this comes back.
Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 15 sec Cardio Sprint
2. Long Split Pulse; 15 sec/side

Week 1 Day 7 - Persist PUMP LIFT 5x
You can train hard, eat well, show up consistently, and still feel like you're not getting anywhere. A lot of the time, the missing piece isn't in the gym at all. It's in your bed.

Sleep is when your body actually does the work. Muscles repair, hormones reset, your nervous system recovers from the stress you put it through. When you cut that short, everything downstream gets harder. Recovery slows, hunger increases, motivation drops, and your performance in the gym starts to reflect it whether you notice it or not.

Most people treat sleep like something to optimize around, something to catch up on when life slows down. Start treating it like training. Protect it the same way you protect your workouts. Seven to nine hours isn't a soft suggestion. It's part of the work.

Warmly,
Marcus

Week 1 Day 5 - Persist PUMP LIFT 4x

A) Daily Focus Notes:
Zercher Split Squat
The Zercher split squat holds the bar in the crook of the elbows rather than on the back or in the hands. That front load position shifts the center of gravity forward, which demands more from the core and upper back to keep the torso upright. Drop straight down into the split squat rather than letting the front knee drift forward past the foot. Reps drop each odd week across the cycle, which means weight goes up each time this comes back.
Short on time? Remove Finisher

Week 1 Day 7 - Persist PUMP LIFT 4x
You can train hard, eat well, show up consistently, and still feel like you're not getting anywhere. A lot of the time, the missing piece isn't in the gym at all. It's in your bed.

Sleep is when your body actually does the work. Muscles repair, hormones reset, your nervous system recovers from the stress you put it through. When you cut that short, everything downstream gets harder. Recovery slows, hunger increases, motivation drops, and your performance in the gym starts to reflect it whether you notice it or not.

Most people treat sleep like something to optimize around, something to catch up on when life slows down. Start treating it like training. Protect it the same way you protect your workouts. Seven to nine hours isn't a soft suggestion. It's part of the work.

Every 75 sec x 6 rounds (3 sets each)
1. Pendlay Row; 5 reps @30X0 Tempo
2. Supinated Strict Pull Up; 5 reps @21X1 Tempo
Loading Note:
Pull Up and Pendlay Row reps are heavy this week with the goal of pushing the intensity on both movements. Aim for the first set of each to be about RPE 7-8. Then you can increase or keep the weight the same for the remainder of the sets based on how much intensity you are wanting to push today. This format is 3 sets of each movement.

Week 1 Day 5 - Persist PUMP COND 5x

A) Daily Focus Notes:
Seated Filly Press
The Seated Filly Press is a single arm pressing movement performed seated. One arm presses while the other holds the kettlebell in a front rack position. A common mistake is letting the elbow on the racked arm rise up. Keep that elbow pointing down. It still works the shoulder and actually creates more core activation through that lateral shift. The pressing arm works through its full range while the racked arm holds the body accountable. The max unbroken drop set at the end of Set 4 uses the Set 1 weight. By that point the pressing muscles have already climbed through three sets of increasing difficulty.
Short on time? Remove Strength Balance or Fatigued Shoulders based on your goals.

Week 1 Day 6 - Persist PUMP COND 5x

A) Daily Focus Notes:
Zercher Split Squat
The Zercher split squat holds the bar in the crook of the elbows rather than on the back or in the hands. That front load position shifts the center of gravity forward, which demands more from the core and upper back to keep the torso upright. Drop straight down into the split squat rather than letting the front knee drift forward past the foot. Reps drop each odd week across the cycle, which means weight goes up each time this comes back.
Short on time? Remove Strength Balance or Carry Conditioning based on your goals.

A) Warmup (8 min):

Week 1 Day 7 - Persist PUMP COND 5x
You can train hard, eat well, show up consistently, and still feel like you're not getting anywhere. A lot of the time, the missing piece isn't in the gym at all. It's in your bed.

Sleep is when your body actually does the work. Muscles repair, hormones reset, your nervous system recovers from the stress you put it through. When you cut that short, everything downstream gets harder. Recovery slows, hunger increases, motivation drops, and your performance in the gym starts to reflect it whether you notice it or not.

Most people treat sleep like something to optimize around, something to catch up on when life slows down. Start treating it like training. Protect it the same way you protect your workouts. Seven to nine hours isn't a soft suggestion. It's part of the work.

Warmly,
Marcus

Week 1 Day 1 - Persist PUMP COND 4x

A) Daily Focus Notes:
Incline Bench Press
The incline bench press shifts the emphasis higher on the chest and onto the front of the shoulder compared to flat bench. Keep the bar path angled back toward the upper chest, not straight down. The 20X1 tempo means the bar moves at a controlled pace on the way down, no pause at the bottom, then drive up. Reps drop each odd week across the cycle, so each time this comes back the weight should go up.
Short on time? Remove Strength Balance or High Turnover Push based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice

Every 75 sec x 6 rounds (3 sets each)
1. Pendlay Row; 5 reps @30X0 Tempo
2. Supinated Strict Pull Up; 5 reps @21X1 Tempo
Loading Note:
Pull Up and Pendlay Row reps are heavy this week with the goal of pushing the intensity on both

movements. Aim for the first set of each to be about RPE 7-8. Then you can increase or keep the weight the same for the remainder of the sets based on how much intensity you are wanting to push today. This format is 3 sets of each movement.

Week 1 Day 4 - Persist PUMP COND 4x

A) Daily Focus Notes:
Seated Filly Press
The Seated Filly Press is a single arm pressing movement performed seated. One arm presses while the other holds the kettlebell in a front rack position. A common mistake is letting the elbow on the racked arm rise up. Keep that elbow pointing down. It still works the shoulder and actually creates more core activation through that lateral shift. The pressing arm works through its full range while the racked arm holds the body accountable. The max unbroken drop set at the end of Set 4 uses the Set 1 weight. By that point the pressing muscles have already climbed through three sets of increasing difficulty.
Short on time? Remove Strength Balance or Fatigued Shoulders based on your goals.

Week 1 Day 7 - Persist PUMP COND 3x
You can train hard, eat well, show up consistently, and still feel like you're not getting anywhere. A lot of the time, the missing piece isn't in the gym at all. It's in your bed.

Sleep is when your body actually does the work. Muscles repair, hormones reset, your nervous system recovers from the stress you put it through. When you cut that short, everything downstream gets harder. Recovery slows, hunger increases, motivation drops, and your performance in the gym starts to reflect it whether you notice it or not.

Most people treat sleep like something to optimize around, something to catch up on when life slows down. Start treating it like training. Protect it the same way you protect your workouts. Seven to nine hours isn't a soft suggestion. It's part of the work.

Warmly,
Marcus

Week 1 Day 1 - Persist PERFORM

A) Daily Focus Notes:
Conventional Deadlift
The conventional deadlift is the foundation of pulling strength in this cycle. Set the hips before the bar leaves the floor and keep the lats engaged through the entire pull. The 20X0 tempo means no pause at the top. Lower with control and reset before the next rep. Reps stay consistent across all three working sets this week with intensity building from RPE 7 to 9.
Short on time? Remove Strength Balance or Run, Hinge, Core based on your goals.

B) Warmup (8 min):

Warm-Up Set - 5 reps @20X0 Tempo - Easy
Working Set 1 - 5 reps @20X0 Tempo - RPE 7
Working Set 2 - 5 reps @20X0 Tempo - RPE 8
Working Set 3 - 5 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

E) Strength Balance (10 min):
Every 75 sec x 6 rounds (3 sets each)
1. Pendlay Row; 5 reps @30X0 Tempo
2. Supinated Strict Pull Up; 5 reps @21X1 Tempo
Loading Note:
Pull Up and Pendlay Row reps are heavy this week with the goal of pushing the intensity on both movements. Aim for the first set of each to be about RPE 7-8. Then you can increase or keep the weight the same for the remainder of the sets based on how much intensity you are wanting to push today. This format is 3 sets of each movement.

F) Run, Hinge, Core (12 min):

6mins AMRAP
150/100m Run
12 Toes to Bar
12 Alternating Russian Kettlebell Swings (6/side) (70/53\#) (Male/Female)
rest 1min and repeat for a total of 2 sets (12 mins of total work)

1-2 sets
1. Lumbar Roll to Pancake Stretch; 5 reps with 5 sec stretch
2. Single Arm Wall Prayer Stretch x 30 sec/side
3. Pigeon Stretch; 30-60 sec/side

Tuesday, July 14th, 2026

Week 1 Day 2 - Persist PERFORM

A) Daily Focus Notes:
Incline Bench Press
The incline bench press shifts the demand higher onto the chest and front of the shoulder compared to flat pressing. Keep the bar path moving back toward the upper chest at the bottom, not straight down. The 20X1 tempo means controlled descent, no pause at the bottom, then drive. Reps drop across the odd weeks of this cycle so each time it comes back the weight goes up.
Short on time? Remove Strength Balance or Chest + Core Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. 15 sec Cardio Sprint
2. 1/2 Turkish Get Up; 5 reps/side
3. Band Pull Apart; 20 reps

C) Cyclical Hot Start (8 min):
Bike
Every 60 sec x 8 sets
10 sec @95% effort
50 sec @easy pace

Effort Note:
Push the pace during the 10 seconds and recover for the remainder of the minute. The pace can gradually increase throughout the 10 minutes as the body warms up.

D) Strength Intensity (15 min):
Incline Bench Press
4 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 12 reps @20X1 Tempo - RPE 7

rest 30 sec
2. Narrow Grip Dumbbell Bench Press; 10-12 reps @20X0 Tempo
rest 90 sec and back to 1.
Loading Note:
Perform 1-2 warmup sets to determine starting weight. Aim for each set to be close to form failure.

F) Chest + Core Conditioning (12-15 min):

Calorie Row (Female Rx Cals - 16-12-8-12-16)
Dumbbell Bench Press (50/35\#) (Male/Female)
Anchored Sit Ups
rest 30 seconds after each round
Effort Note:
This is a pyramid rep scheme. Descending to the middle, then climbing back up. The first two rounds are the longest, so pace accordingly. The row gives the pressing muscles a brief break between sets. Push the pace on the bench and sit ups in the shorter middle rounds when you have the most left in the tank. Rest 30 seconds after each round and use it to reset before the next set.

G) Cooldown (5 min):
1-2 sets
1. Sidelying 90/90 Thoracic Rotation; 5 reps/side

2. Seated Shoulder Extension Stretch; 30 sec
3. Passive Hang; 30 sec

Wednesday, July 15th, 2026

Week 1 Day 3 - Persist PERFORM

A) Daily Focus Notes:
Cyclist Back Squat
The cyclist back squat elevates the heels which shifts the demand almost entirely onto the quads. The bar is on the back but the heel elevation and upright torso make this feel much closer to a front squat in terms of quad demand. Keep the knees tracking forward over the toes and stay as upright as possible through every rep. Reps drop across the odd weeks so the weight goes up each time it returns.
Short on time? Remove Strength Balance or Power Endurance based on your goals.

B) Warmup (8 min):
3 Rounds

rest 60 sec
2. Barbell Hip Thrust; 10-12 reps @21X1 Tempo
rest 90 sec and back to 1.
Loading Note:
Perform 1-2 warmup sets to determine starting weight. Aim for RPE 7-8 on the first working set, then keep the weight the same for the remainder of the sets, or increase the weight each set if looking to increase intensity.

Anchored Sit Ups
Alternating Russian Kettlebell Swings 70/53\# (Male/Female) (R+L=2)

G) Cooldown (5 min):
1-2 sets
1. Slantboard Jefferson Pulse; 30 sec
2. Half Kneeling Hip Flexor Stretch; 30 sec/side

Week 1 Day 5 - Persist PERFORM

A) Daily Focus Notes:
Seated Filly Press
The Seated Filly Press is a single arm pressing movement performed seated. One arm presses while the other holds the dumbbell in a front rack position. A common mistake is letting the elbow on the racked arm rise up. Keep that elbow pointing down. It still works the shoulder and creates more core activation through that lateral shift. The max unbroken drop set at the end of Set 4 uses the Set 1 weight.
Short on time? Remove Strength Balance or Push Pull Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets
1. Offset Push Up; 6 reps/side
2. Ring Row; 12 reps

C) Jerk Progression (12 min):

Effort Note:
Assist your bodyweight gymnastics with a band as needed to hit the desired reps without needing to break up the sets. Aim to accumulate a lot of quality reps by not hitting failure too soon into the AMRAP.

G) Cooldown (5 min):
1-2 sets
1. Forward Shoulder Wall Circles; 10 reps/side
2. Banded Shoulder Flexion Stretch; 30 sec
3. Banded Shoulder Extension Stretch; 30 sec

Saturday, July 18th, 2026

Week 1 Day 6 - Persist PERFORM

A) Daily Focus Notes:
Zercher Split Squat
The Zercher split squat holds the bar in the crook of the elbows which shifts the load forward and demands more core and upper back engagement to stay upright compared to a back rack position. The split stance isolates each leg independently. Keep the front heel flat and drive through it on every rep. Reps drop across the odd weeks so the weight goes up each time it returns.
Short on time? Remove Strength Balance or Couple of Couplets based on your goals.

B) Warmup (8 min):

Week 1 Day 5 - Persist MINIMALIST

A) Daily Focus Notes:
Split Stance DB RDL
The split stance RDL shifts most of the hinge demand onto the front leg. Keep the back foot lightly in contact with the floor for balance but drive the movement from the front hip. Hinge back until the hamstring of the front leg reaches its end range, then drive through the heel to stand. Reps stay the same across the odd weeks but build in RPE, which means the weight goes up each set.
Short on time? Remove Strength Balance or Carry Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
-
3 Sets

Week 1 Day 7 - Persist MINIMALIST
You can train hard, eat well, show up consistently, and still feel like you're not getting anywhere. A lot of the time, the missing piece isn't in the gym at all. It's in your bed.

Sleep is when your body actually does the work. Muscles repair, hormones reset, your nervous system recovers from the stress you put it through. When you cut that short, everything downstream gets harder. Recovery slows, hunger increases, motivation drops, and your performance in the gym starts to reflect it whether you notice it or not.

Most people treat sleep like something to optimize around, something to catch up on when life slows down. Start treating it like training. Protect it the same way you protect your workouts. Seven to nine hours isn't a soft suggestion. It's part of the work.

Warmly,
Marcus
