Pump Lift 5x

Monday, July 20th, 2026

Week 2 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Supinated Bent Over Row
The supinated bent over row uses an underhand grip, which brings the elbows closer to the body and shifts more of the load onto the biceps and mid back. Keep the torso parallel to the floor and pull the bar toward the lower stomach. The 20X1 tempo means the bar moves quickly up but takes a full second at the top before returning. Four working sets with a max unbroken drop set at the end.
Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. Dual Dumbbell Sumo Deadlift High Pull; 8 reps
2. DB Meadows Row; 12 reps/side

C) Strength Intensity 1 (15 min):
Stiff Leg Deadlift
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @20X0 Tempo - Easy
Working Set 1 - 10 reps @20X0 Tempo - RPE 7
Working Set 2 - 8 reps @20X0 Tempo - RPE 8
Working Set 3 - 6 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12 min):
Supinated Bent Over Row

Every 2:30 x 4 Working Sets
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 10 @20X1 Tempo - RPE 7
Working Set 2 - 8 @20X1 Tempo - RPE 8

E) Strength Balance (12 min):
Lat Pulldown or Pronated Strict Pull Up
Every 2:30 x 3 Working Sets
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 10 @20X1 Tempo - RPE 7
Working Set 2 - 10 @20X1 Tempo - RPE 8
Working Set 3 - 10 @20X1 Tempo - RPE 9
Loading Note:
Immediately following your last working set, perform a single drop set to failure. This means that you will drop the weight by 30% and complete max reps unbroken. If performing pull ups, add band assistance and aim for 5+ reps on your drop set.

F) Finisher (10 min):
2-3 sets
1. Hammer Curl; 10 reps @20X0 Tempo
rest 15-30 sec
2. Dumbbell Waiter Curl Pulses; 20 sec
rest 90 sec and back to 1.

Aim for each set to be close to failure.

G) Cooldown (5 min):
1-2 sets
1. Pike Stretch; 30-60 sec
2. Prayer Stretch; 30-60 sec
3. Dynamic Pigeon on Hands and Knees; 3 reps/side with 5 sec stretch.

Week 2 Day 2 - Persist PUMP LIFT 5x

A) Daily Focus Notes:

Alternating Dumbbell Bench Press
The alternating dumbbell bench press works one arm at a time while the other holds the dumbbell in the top position. The arm that is waiting is not resting. It is actively stabilizing while the other arm presses. That demand on both sides at once builds more total shoulder and chest tension than a standard bilateral press. Ten reps per side across all three working sets at the same load. Because the reps stay constant, the only way to hit the climbing RPE targets is to add weight each set.
Short on time? Remove Finisher

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. 15 sec Cardio Sprint
2. Arm Bar Rotation; 5 reps/side
3. Banded YTW; 5-7 reps in each position

Alternating Dumbbell Bench Press
3 Working Sets; rest 2-3 min
Warm-Up Set - 8 reps/side @30X0 Tempo - Easy

Thursday, July 23rd, 2026

Week 2 Day 3 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
B Stance Hip Thrust
The B stance hip thrust shifts most of the load onto one leg at a time while the other provides a small amount of support. This increases the demand on each glute individually compared to the standard bilateral version. Drive through the heel of the working leg and squeeze hard at the top of every rep. The 20X1 tempo means one second at the top before lowering. Do not skip that pause. Reps hold the same count across all three sets, so the only way to hit the climbing RPE targets is to add weight each set.
Short on time? Remove Finisher

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Foot Elevated Cossack Squat; 5-7 reps/side
3. Lateral Banded Walk; 10 steps/side

Week 2 Day 5 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Back Supported Arnold Press

The back supported Arnold press starts with the palms facing you and the elbows low, then rotates the grip to pronated as the arms extend overhead. That rotation trains the shoulder through a longer arc than a standard press. The back support removes any lean or leg drive, which keeps the demand entirely on the shoulder. Ten reps at the same load across all three working sets. The only way to hit the climbing RPE targets is to add weight each set.
Short on time? Remove Strength Balance or Finisher based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice

Week 2 Day 6 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Landmine Hack Squat
The landmine hack squat holds the bar behind the body at the end of the landmine with the heels elevated. That setup shifts the load forward onto the quads and creates a more vertical squat path than a standard back squat. Keep the chest up and drive the knees forward over the toes throughout the descent. Twelve reps across the first two working sets at the same load, building from RPE 8 to 9. The final set is max unbroken at Set 1 weight. That last set is where the real work happens.
Short on time? Remove Strength Balance or Finisher based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. 15 sec Cardio Sprint
2. Long Step Walking Lunge; 6-8 reps/side

Week 2 Day 7 - Persist PUMP LIFT 5x

If there's one nutrition lever that moves more than any other, it's protein. Not the latest supplement, not the trending diet. Just getting enough protein, consistently, every day.

Most people think they're eating enough and aren't. Research is pretty clear that most active people need somewhere around 0.7 to 1 gram per pound of bodyweight to support muscle, manage hunger, and recover well. That's more than the average person gets from just eating normally.

The good news is you don't need to overhaul everything to fix it. Start by anchoring each meal around a solid protein source and build the rest of the plate from there. It's not complicated, it just has to be intentional. When protein is dialed in, a lot of the other nutrition stuff starts to take care of itself.

Warmly,
Marcus

Week 2 Day 1 - Persist PUMP LIFT 4x

A) Daily Focus Notes:
Pendlay Row
The Pendlay row starts each rep from a dead stop on the floor. The bar returns to the floor between every rep, which removes any momentum and makes each pull start from scratch. Keep the torso parallel to the floor and pull the bar to the lower chest or upper stomach. The 20X1 tempo means the bar moves quickly up but takes a full second at the top before returning. Four working sets with a max unbroken drop set at the end.
Short on time? Remove Finisher

The 20X1 tempo means one second at the top before lowering. Do not skip that pause. All three working sets hold the same rep count, so the only way to hit the climbing RPE targets is to add weight each set.

Week 2 Day 5 - Persist PUMP LIFT 4x

A) Daily Focus Notes:

Stiff Leg Deadlift

The stiff leg deadlift keeps the legs nearly locked, which shifts the load almost entirely onto the hamstrings and glutes. The bar stays close to the body on the way down and the hips hinge back until the hamstrings reach their end range. Reps drop across the working sets this week. Use straps

here. The weights are heavy enough that grip will become the limiter before the hamstrings do, and the goal is to keep the demand on the posterior chain, not the hands.
Short on time? Remove Finisher

Week 2 Day 7 - Persist PUMP LIFT 4x

If there's one nutrition lever that moves more than any other, it's protein. Not the latest supplement, not the trending diet. Just getting enough protein, consistently, every day.

Most people think they're eating enough and aren't. Research is pretty clear that most active people need somewhere around 0.7 to 1 gram per pound of bodyweight to support muscle, manage hunger, and recover well. That's more than the average person gets from just eating normally.

The good news is you don't need to overhaul everything to fix it. Start by anchoring each meal around a solid protein source and build the rest of the plate from there. It's not complicated, it just has to be intentional. When protein is dialed in, a lot of the other nutrition stuff starts to take care of itself.

Week 2 Day 1 - Persist PUMP LIFT 3x

A) Daily Focus Notes:

Supinated Bent Over Row
The supinated bent over row uses an underhand grip, which brings the elbows closer to the body and shifts more of the load onto the biceps and mid back. Keep the torso parallel to the floor and pull the bar toward the lower stomach. The 20X1 tempo means the bar moves quickly up but takes a full second at the top before returning. Four working sets with a max unbroken drop set at the end.
Short on time? Remove Strength Balance or Finisher based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets

Week 2 Day 3 - Persist PUMP LIFT 3x

A) Daily Focus Notes:
Lat Pulldown / Pronated Pull Up
The lat pulldown and pull up cluster alternate across this cycle. Odd weeks go heavy with the pull up cluster. Even weeks shift to the lat pulldown or pronated pull up with higher volume and a drop set at the end. That combination builds lat strength from two different angles. The cluster weeks train the lat to produce force explosively under high tension. The pulldown weeks accumulate more total reps and keep the muscle under load longer. Together, they build the kind of lat strength and pulling endurance that carries over to every row and pull up variation in the program.
Short on time? Remove Strength Balance, or Finisher based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice

Barbell Strict Press
The barbell strict press alternates with the Seated Filly Press across this cycle. This week the load is bilateral. No leg drive, no lean back. Pump Condition 5x

Monday, July 20th, 2026

Week 2 Day 1 - Persist PUMP COND 5x

A) Daily Focus Notes:
Pendlay Row + Supinated Pull Up
Two pulling movements alternating every 75 seconds. The Pendlay row starts each rep from a dead stop on the floor. The supinated pull up follows while the back is still warm from the row. Five reps on each, heavy, building across the three sets. Reps drop as the sets progress. That is the cue to add weight on both the row and the pull up.
Short on time? Remove Strength Balance or Sprint Hinge Core based on your goals.

A) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. Dual Dumbbell Sumo Deadlift High Pull; 8 reps
2. DB Meadows Row; 12 reps/side

B) Strength Intensity (15 min):
Stiff Leg Deadlift
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @20X0 Tempo - Easy
Working Set 1 - 10 reps @20X0 Tempo - RPE 7
Working Set 2 - 8 reps @20X0 Tempo - RPE 8
Working Set 3 - 6 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

C) Strength Balance (10 min):
Every 75 sec x 6 (3 sets each)
1. Pendlay Row; 5 reps @30X0 Tempo

2. Supinated Strict Pull Up; 5 reps @21X1 Tempo

Loading Note:

Pull Up and Pendlay Row reps are heavy this week with the goal of pushing the intensity on both movements. Aim for the first set of each to be about RPE 7-8. Then you can increase or keep the weight the same for the remainder of the sets based on how much intensity you are wanting to push today. This format is 3 sets of each movement. Only one exercise is performed every 75 seconds.

D) Sprint Hinge Core (15 min):
4 Sets
Row 15sec @ HIGH TEMPO
rest 15sec
Dual Russian KB Swings x 12 reps
rest 15sec
Kettlebell Side Plank x 20sec/side
rest walk 90sec
Effort Note:
The goal for this conditioning is to push the pace on the cardio machine. The intensity should start relatively high and increase each set. The additional movements should be performed at a consistent but hard pace. The rest is intentional to allow for the higher outputs.

E) Cooldown (5 min):
1-2 sets
1. Pike Stretch; 30-60 sec
2. Prayer Stretch; 30-60 sec
3. Dynamic Pigeon on Hands and Knees; 3 reps/side with 5 sec stretch.

Week 2 Day 2 - Persist PUMP COND 5x

A) Daily Focus Notes:
Alternating DB Bench Press + Cable Tricep Push Down
The alternating DB bench press goes first, working each side independently through a full pressing range. Moving immediately into the cable tricep push down or dumbbell skullcrusher keeps the triceps under load while they are already fatigued from the pressing work. Two movements that target the same muscle group from different angles with minimal rest between them. Push close to failure on both each set.
Short on time? Remove Strength Balance or High Turnover Push based on your goals.

A) Warmup (8 min):

Week 2 Day 3 - Persist PUMP COND 5x

A) Daily Focus Notes:
Goblet Curtsy Squat + B-Stance Barbell Hip Thrust
Two movements that work the hips through very different patterns back to back. The goblet curtsy squat loads the glute through a rotational pattern and demands hip strength and stability through a crossing range of motion. Moving into the B-stance barbell hip thrust keeps the glutes working but now through a more direct loading position. The B-stance shifts most of the demand onto one glute at a time. Keep the rest between the two movements short.
Short on time? Remove Strength Balance or Functional Ab + Leg Pump based on your goals.

A) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Foot Elevated Cossack Squat; 5-7 reps/side

Week 2 Day 5 - Persist PUMP COND 5x

A) Daily Focus Notes:
Dumbbell Upright Row + Lean Away Lateral Raise
Two movements that build the upper shoulder from different angles back to back. The upright row pulls the weight vertically and loads the upper trap and front of the shoulder through a short arc. The lean away lateral raise that follows isolates the side delt through a longer, more direct range. Keep the tempo slow on the lateral raise. A fast lateral raise becomes a shrug, which shifts the work away from the delt and defeats the purpose of the pairing.
Short on time? Remove Strength Balance or Fatigued Shoulders based on your goals.

A) Warmup (8 min):

Week 2 Day 6 - Persist PUMP COND 5x

A) Daily Focus Notes:
45 Degree Back Extension + Cobra Leg Behind Squat
Two posterior chain movements that work the hips and glutes from completely different positions. The 45 degree back extension loads the hamstrings and glutes through a controlled arc with the hips fixed on the pad. Lower slowly and drive back up from the hips. The cobra leg behind squat that follows challenges single leg strength and hip mobility in the same session. Keep the back leg low and the front heel planted through the whole rep. Push close to RPE 8-9 on both movements each set.

Week 2 Day 7 - Persist PUMP COND 5x

If there's one nutrition lever that moves more than any other, it's protein. Not the latest supplement, not the trending diet. Just getting enough protein, consistently, every day.

Most people think they're eating enough and aren't. Research is pretty clear that most active people need somewhere around 0.7 to 1 gram per pound of bodyweight to support muscle, manage hunger, and recover well. That's more than the average person gets from just eating normally.

The good news is you don't need to overhaul everything to fix it. Start by anchoring each meal around a solid protein source and build the rest of the plate from there. It's not complicated, it just has to be intentional. When protein is dialed in, a lot of the other nutrition stuff starts to take care of itself.

Week 2 Day 1 - Persist PUMP COND 4x

A) Daily Focus Notes:
Lat Pulldown + Supinated Bent Over Row
Two pulling movements back to back within each working set with no rest between them. The lat pulldown or pull up goes first and targets the lat through a vertical pulling path. Moving immediately into the supinated bent over row keeps the back working through a horizontal pull while the lats are already fatigued. Together they cover both pulling planes in one continuous effort.
Short on time? Remove Strength Balance or High Turnover Push based on your goals.

Week 2 Day 2 - Persist PUMP COND 4x

A) Daily Focus Notes:
Goblet Curtsy Squat + B-Stance Barbell Hip Thrust
Two movements that work opposite sides of the lower body in sequence. The curtsy squat loads one leg at a time through a crossing pattern that challenges hip stability in a way a standard squat does not. Moving into the B-stance hip thrust immediately after keeps the glutes working through a completely different pattern, with one leg doing most of the work. By the time both are done the hips and glutes have been under demand for a long time. The rest between the two movements is short by design.

Monday, July 20th, 2026

A) Daily Focus Notes:
Pendlay Row + Supinated Pull Up

Two pulling movements alternating every 75 seconds. The Pendlay row starts each rep from a dead stop on the floor. The supinated pull up follows while the back is still warm from the row. Five reps on each, heavy, building across the three sets. Reps drop as the sets progress. That is the cue to add weight on both the row and the pull up.

Drive through the heel of the working leg and squeeze hard at the top of every rep. The alternating dumbbell curl that follows keeps the arms working while the lower body recovers. Week 2 Day 1 - Persist PERFORM

A) Daily Focus Notes:
Pendlay Row + Supinated Strict Pull Up
Two pulling movements alternating every 75 seconds. The Pendlay row starts each rep from a dead stop on the floor, which removes any momentum and keeps the demand honest across every rep. The supinated pull up that follows hits the lat and bicep through a vertical pulling path. Together they cover horizontal and vertical pulling in the same short window. Aim for RPE 7-8 on the first set of each and push from there.
Short on time? Remove Strength Balance or Run, Hinge, Core based on your goals.

Week 2 Day 2 - Persist PERFORM

A) Daily Focus Notes:
Alternating DB Bench Press + Cable Tricep Push Down
Two chest and tricep movements back to back with minimal rest between them. The alternating dumbbell bench press works each side independently through a full pressing range. Moving immediately into the tricep push down or skullcrusher keeps the triceps under load through a different angle while the chest is already fatigued. Push close to failure on both movements each set.
Short on time? Remove Strength Balance or Chest + Core Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. 15 sec Cardio Sprint
2. Arm Bar Rotation; 5 reps/side
3. Banded YTW; 5-7 reps in each position

C) Cyclical Hot Start (9 min):
6 sets
Row 60 sec @easy pace
Row 30 sec @hard pace
Effort Note:
Aim for a consistent pace in both sections throughout the full 6 sets. It may take 1-2 sets to determine the appropriate pacing. The 60 sec should feel comfortable, and the 30 seconds should feel annoying but doable.

D) Strength Intensity (15 min):
Close Grip Bench Press
4 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 12 reps @20X1 Tempo - RPE 7

rest 30 sec
2. Cable Tricep Push Down or Dumbbell Skullcrusher; 10 reps @21X1 Tempo
rest 90 sec and back to 1.
Loading Note:
Perform 1-2 warmup sets to determine starting weight. Aim for each set to be close to form failure.

F) Chest + Core Conditioning (12-15 min):
For Time

20-15-10
Strict Bar Dip or Ring Dip
GHD Sit Ups
20-15-10
Push Ups
Hollow Rocks
500/400m Row
Effort Note:
The two rows bookend the pressing and core work. Use the first row to settle into a pace that leaves enough in the tank for the dips and sit ups that follow. The dips are the most demanding movement in this piece. Break them early if needed rather than hitting failure. The push ups and hollow rocks come after the dips are already fatigued, so expect those sets to feel harder than the numbers suggest. Push the second row as hard as what remains allows.

G) Cooldown (5 min):
1-2 sets
1. Banded Single Arm Lat Stretch; 30 sec/side

2. Shoulder Extension Bridge; 5-10 reps
3. Supinated Passive Hang; 30 sec

Week 2 Day 3 - Persist PERFORM

A) Daily Focus Notes:
Goblet Curtsy Squat + B-Stance Barbell Hip Thrust
Two movements that work the hips through very different patterns back to back. The goblet curtsy squat loads the glute through a rotational crossing pattern that challenges hip stability in a way a standard squat does not. Moving into the B-stance barbell hip thrust immediately after keeps the glutes working through a more direct loading position, with most of the demand shifted onto one glute at a time. Aim for RPE 7-8 on the first set of each and build from there.
Short on time? Remove Strength Balance or Power Endurance based on your goals.

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice

Week 2 Day 5 - Persist PERFORM

A) Daily Focus Notes:
Dumbbell Upright Row + Lean Away Dumbbell Lateral Raise
Two movements that target the side delt and upper back from different angles back to back. The upright row loads the side delt and traps through a vertical pulling path. The lean away lateral raise that follows isolates the side delt through a longer arc by shifting the body away from the anchor. Keep the tempo slow on the raise. A fast lateral raise becomes a shrug, which moves the work away from the delt. Push close to failure on both movements each set.
Short on time? Remove Strength Balance or Push Pull Conditioning based on your goals.

B) Warmup (8 min):
2 min Cardio of Choice
3 Sets
1. Inchworm Push Up; 6-8 reps

2. Ring Row Hold; 30 sec

C) Jerk Progression (12 min):

3 Mixed Grip Strict Pull Ups (switch grip on this set)
20/16 Calorie Bike
Effort Note:
Aim to accumulate a lot of quality reps by not hitting failure too soon into the AMRAP. Allow your upper body fatigue to dictate how you are breaking up sets. Push the pace on the bike as your breathing will likely be less of a problem than your upper body fatigue.

G) Cooldown (5 min):
1-2 sets
1. Pole Rhomboid Stretch; 30 sec
2. Straight Arm Shoulder Rotations; 10 reps/side
3. Banded Single Arm Pec Stretch; 30 sec/side

Week 2 Day 6 - Persist PERFORM

A) Daily Focus Notes:
45 Degree Back Extension + Cobra Leg Behind Squat
Two posterior chain movements that work the hips and hamstrings from completely different positions. The 45 degree back extension loads the hamstrings and glutes through a hip hinge under a slow controlled tempo. The cobra leg behind squat that follows challenges single leg strength and hip mobility in the same session. Keep the back leg low and the front heel planted through the whole rep. Push close to RPE 8-9 on both movements each set.
Short on time? Remove Strength Balance or Couple of Couplets based on your goals.

B) Warmup (8 min):

Week 2 Day 7 - Persist PERFORM

If there's one nutrition lever that moves more than any other, it's protein. Not the latest supplement, not the trending diet. Just getting enough protein, consistently, every day.

Most people think they're eating enough and aren't. Research is pretty clear that most active people need somewhere around 0.7 to 1 gram per pound of bodyweight to support muscle, manage hunger, and recover well. That's more than the average person gets from just eating normally.

The good news is you don't need to overhaul everything to fix it. Start by anchoring each meal around a solid protein source and build the rest of the plate from there. It's not complicated, it just has to be intentional. When protein is dialed in, a lot of the other nutrition stuff starts to take care of itself.

Warmly,
Marcus

Week 2 Day 1 - Persist MINIMALIST

A) Daily Focus Notes:
Pronated Pull Up + Supinated DB Bent Over Row
Two pulling movements back to back within each working set with no rest between them. The pronated pull up goes first and targets the lat through a vertical pulling path. Moving immediately into the supinated dumbbell bent over row keeps the back working through a horizontal pull while the lats are already fatigued. Together they cover both pulling planes in one continuous effort. Short on time? Remove Strength Balance or High Turnover Push based on your goals.

A) Daily Focus Notes:
Alternating DB Bench Press + DB Tate Press
Two movements that target the chest and triceps back to back with minimal rest between them. The alternating dumbbell bench press works each side independently through a full pressing range. Moving immediately into the Tate press keeps the triceps under load through a completely

different angle — the elbows flare wide and the dumbbells lower toward the chest, which emphasizes the medial and lateral heads of the tricep. Push close to failure on both each set. Short on time? Remove Strength Balance or Fatigued Shoulders based on your goals.

If there's one nutrition lever that moves more than any other, it's protein. Not the latest supplement, not the trending diet. Just getting enough protein, consistently, every day.

Most people think they're eating enough and aren't. Research is pretty clear that most active people need somewhere around 0.7 to 1 gram per pound of bodyweight to support muscle, manage hunger, and recover well. That's more than the average person gets from just eating normally.

The good news is you don't need to overhaul everything to fix it. Start by anchoring each meal around a solid protein source and build the rest of the plate from there. It's not complicated, it just has to be intentional. When protein is dialed in, a lot of the other nutrition stuff starts to take care of itself.

Warmly,
Marcus
