Week 6 Day 1 - Persist PUMP LIFT 5x

A) Daily Focus Notes:
Stiff Leg Deadlift Progression
The stiff leg deadlift keeps the legs nearly locked, which shifts the load almost entirely onto the hamstrings and glutes. The bar stays close to the body on the way down and the hips hinge back until the hamstrings reach their end range. Reps vary across the three working sets this week. Each drop in reps means the weight goes up. Use straps here. The weights are heavy enough that grip will become the limiter before the hamstrings do, and the goal is to keep the demand on the posterior chain, not the hands.
Short on time? Remove Finisher

B) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Single DB RDL; 6-8 reps/side
3. Supinated Body Row; 12-15 reps

C) Strength Intensity 1 (15 min):
Stiff Leg Deadlift
3 Working Sets; rest 2-3 min
Warm-Up Set - 10 reps @20X0 Tempo - Easy
Working Set 1 - 8 reps @20X0 Tempo - RPE 7
Working Set 2 - 6 reps @20X0 Tempo - RPE 8
Working Set 3 - 4 reps @20X0 Tempo - RPE 9
RPE = Rate of Perceived Exertion - scale of 10, where 10 is form failure.

D) Strength Intensity 2 (12 min):
Supinated Bent Over Row
Every 2:30 x 4 Working Sets
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 15 @20X1 Tempo - RPE 7
Working Set 2 - 12 @20X1 Tempo - RPE 8
Working Set 3 - 10 @20X1 Tempo - RPE 9
Working Set 4 - Drop back to your Set 1 weight and perform Max Unbroken reps @20X1 Tempo (Aim for 8+ reps)
Loading Note: For this training cycle, the barbell bent over row will be increasing in reps throughout the 6 weeks. The Max Unbroken set from two weeks prior will support you in determining which weight to start with for this week.

E) Strength Balance (10 min):
Lat Pulldown or Pronated Strict Pull Up
Every 2:30 x 3 Working Sets
Warm-Up Set - 10 reps @20X1 Tempo - Easy
Working Set 1 - 6 @20X1 Tempo - RPE 7
Working Set 2 - 6 @20X1 Tempo - RPE 8
Working Set 3 - 6 @20X1 Tempo - RPE 9
Loading Note: Immediately following your last working set, perform a single drop set to failure. This means that you will drop the weight by 30% and complete max reps unbroken. If performing pull ups, add band assistance and aim for 5+ reps on your drop set. Aim to increase weight across the sets compared to previous weeks.

F) Finisher (8 min):
Barbell Reverse Curl
Every 45-60sec x 6 reps @20X0 Tempo
Loading Note:
Select a weight that feels about RPE 7-8 on the first set.

1-2 sets
1. Pike Stretch; 30-60 sec
2. Prayer Stretch; 30-60 sec
3. Dynamic Pigeon on Hands and Knees; 3 reps/side with 5 sec stretch.

Aim to beat Week 3 across all working sets.
Short on time? Remove Finisher

Week 6 Day 7 - Persist PUMP LIFT 5x

Nobody wants to hear this one, but it might be the most important thing I can tell you.

Real change takes longer than most people expect. Not because something is wrong with you or your program, but because that's just how the body works. Muscle is built slowly. Strength accumulates over months and years. Fat loss that actually sticks happens gradually. The timeline most people have in their head is usually off by a factor of two or three.

What I've seen over and over again is that the people who get the best results aren't the ones who found the perfect program. They're the ones who stayed long enough for anything to work. They stopped looking for faster and started getting better at showing up. They learned to find meaning in the process rather than waiting for the outcome to feel good about what they were doing.

If you're in it right now and not seeing what you expected, don't change everything. Stay in it a little longer. The results are usually closer than you think.

Warmly,
Marcus

Week 6 Day 7 - Persist PUMP LIFT 4x

Nobody wants to hear this one, but it might be the most important thing I can tell you.

Real change takes longer than most people expect. Not because something is wrong with you or your program, but because that's just how the body works. Muscle is built slowly. Strength accumulates over months and years. Fat loss that actually sticks happens gradually. The timeline most people have in their head is usually off by a factor of two or three.

What I've seen over and over again is that the people who get the best results aren't the ones who found the perfect program. They're the ones who stayed long enough for anything to work. They stopped looking for faster and started getting better at showing up. They learned to find meaning in the process rather than waiting for the outcome to feel good about what they were doing.

If you're in it right now and not seeing what you expected, don't change everything. Stay in it a little longer. The results are usually closer than you think.

Warmly,
Marcus

Week 6 Day 1 - Persist PUMP COND 5x

A) Daily Focus Notes:
Stiff Leg Deadlift
The final deadlift session of the cycle. Reps are at their lowest this week across all three working sets, which means this should be the heaviest pulling work of the six weeks. The stiff leg variation keeps the demand on the hamstrings and glutes from start to finish. Use straps. Grip should not be the reason the weight stays light on the last session of the cycle.
Short on time? Remove Strength Balance or Sprint Hinge Core based on your goals.

A) Warmup (8 min):
3 Rounds
1. 90 sec Cardio of Choice
2. Single DB RDL; 6-8 reps/side

Perform the pulldown or pull up and then go immediately to the bent over row. Aim for the first set to be RPE 7-8 and then keep the weight the same or increase the weight based on the intensity you want to push today. The reps are staying the same for this cycle with the goal of increasing weight.

4 Sets
Bike 20sec @ HIGH TEMPO
rest 15sec
Devils Press x 8 Reps

The goal for this conditioning is to push the pace on the cardio machine. The intensity should start relatively high and increase each set. The additional movements should be performed at a consistent but hard pace. The rest is intentional to allow for the higher outputs.

E) Cooldown (5 min):
1-2 sets
1. Pike Stretch; 30-60 sec

Week 6 Day 6 - Persist PUMP COND 5x

A) Daily Focus Notes:
Back Rack Reverse Lunge Progression
The final lunge session of the cycle. Reps drop to nine, seven, and five across the three working sets, which means this should be the heaviest lunge work of the six weeks. Step straight back and keep the front shin as vertical as possible. The back knee should come close to the floor on every rep. With the load on the back rack, the core has to work hard to keep the torso from pitching forward as the weight increases.
Short on time? Remove Strength Balance or Carry Conditioning based on your goals.

Week 6 Day 7 - Persist PUMP COND 5x

Nobody wants to hear this one, but it might be the most important thing I can tell you.

Real change takes longer than most people expect. Not because something is wrong with you or your program, but because that's just how the body works. Muscle is built slowly. Strength accumulates over months and years. Fat loss that actually sticks happens gradually. The timeline most people have in their head is usually off by a factor of two or three.

What I've seen over and over again is that the people who get the best results aren't the ones who found the perfect program. They're the ones who stayed long enough for anything to work. They stopped looking for faster and started getting better at showing up. They learned to find meaning in the process rather than waiting for the outcome to feel good about what they were doing.

If you're in it right now and not seeing what you expected, don't change everything. Stay in it a little longer. The results are usually closer than you think.

Warmly,
Marcus

Week 6 Day 7 - Persist PERFORM

Nobody wants to hear this one, but it might be the most important thing I can tell you.

Real change takes longer than most people expect. Not because something is wrong with you or your program, but because that's just how the body works. Muscle is built slowly. Strength accumulates over months and years. Fat loss that actually sticks happens gradually. The timeline most people have in their head is usually off by a factor of two or three.

What I've seen over and over again is that the people who get the best results aren't the ones who found the perfect program. They're the ones who stayed long enough for anything to work. They stopped looking for faster and started getting better at showing up. They learned to find meaning in the process rather than waiting for the outcome to feel good about what they were doing.

If you're in it right now and not seeing what you expected, don't change everything. Stay in it a little longer. The results are usually closer than you think.

Warmly,
Marcus
